Palikir, Pohnpei FM 96941

PREFACE

The Division of Statistics, Department of Economic Affairs, FSM is the primary statistical arm of the government, which prepares for and conducts periodic censuses of population and housing. It also conducts surveys and research on various aspects of socio-economic conditions including national accounts, labor and employment and price situations in the country for the use of the government and the public. It also collects and processes data for statistical purposes from various offices and agencies of the government. More importantly, it enforces and carries out the provision of the FSM Public Law 5-77 in all statistical activities.

As demand for timely and reliable census of population and housing increased, it was decided to conduct another census count in the year 2000. The previous Censuses of the FSM were conducted in 1985, 1986, 1987, 1989 and 1994. The planning and preparation phases of the 2000 FSM Census of Population and Housing was conducted in 1999 mostly by the local staff within the Division of Statistics. The 2000 Census was the second to be organized and conducted at one point in time, therefore data from the two censuses are comparable. The third FSM Census of Population and Housing will be conducted by the year 2010.

During the 2000 Census, technical supports were received from the United States Bureau of the Census (USBC), International Programs Center, and the Secretariat of the Pacific Community (SPC). From the USBC, Dr. Michael Levin participated in the preparation phase until the final review of the census product. From SPC, Mrs. Vilimaina Rakaseta involved with the analysis phase. The Government of the FSM funded the 2000 Census with support from the United States Government. The FSM Congress appropriated \$500,000 for the project and the United States Government through U.S. Office of the Insular Affairs provided in-kind contributions.

The actual enumeration was conducted from April 1 to 17, 2000. The field staff consisted of 39 field supervisors in Chuuk, 8 in Yap, 25 in Pohnpei and 5 in Kosrae. For Enumerators, 48 were hired for Yap, 185 for Chuuk, 130 for Pohnpei and 32 for Kosrae. Those with a good fieldwork record were hired for the preliminary review, coding and keying operation. There were 44 editors and coders recruited to edit and code the remaining variables not covered during the preliminary process and these were retained and trained as computer operators. Text tables were designed for the preparation of the 5 analytical reports: one for each state and a consolidated set to cover the entire FSM. The Division of Statistics staff and State Field Supervisors coordinated the write up of the census analytical reports for the FSM and each of the four states. The experts from USBC assisted in the review process and made comments on the reports. It was agreed that the State Census Reports would basically adopt the format used in the National Census Report, but detailed to the municipality level for consistency and comparison purposes.

It is important to thank the individual staff that were directly involved and dedicated their efforts to the 2000 FSM Census project. Mr. Tilson Kephass was responsible for programming and supervising the data processing and production of the tables. Ms. Brihmer Johnson, Ms. Itorie Amond and Mr. Joston Edmond were dedicated workers in their assignments and Ms. Alice Bridge Ehmes played a key role in the final report writing. The four state field supervisors namely Mr. Anthony Albert from Chuuk State, Mr. Stoney Taulung from Kosrae State, Ms. Virginia Helgenberger from Pohnpei and Mr. Thomas Foruw from Yap State, all worked closely with the Division of Statistics staff from the planning and designing phase until the finalization of the report. Many other staff of the statistics office also assisted including Ms. Mary Rose Nakayama of the Chuuk Branch Statistics Office, who was involved in the final editing of the report, Mrs. Marsellie Obed who was responsible for the administrative work of the project, and Mr. Glenn McKinlay who currently serves as the Statistics Advisor, whose services are funded by the Australian Aid for International Development, and provided tremendous work during the final phase of the project. The individuals involved in the 2000 Census project are permanent staff of the Statistics Division. This project would not have been possible without these individuals' contributions.

Phone: (691) 320-2646/5133/2620 Telex: (720) 6807 Fax: (691) 320-5854 E-mail: fsmrd@mail.fm

I also wish to extend a special appreciation to Dr. Michael Levin from the USBC, International Program Center, who has contributed a lot to the 1994 and 2000 FSM Censuses. The type of support given by Dr. Levin is superb and hopefully the good working relationship will be continued in future statistical activities.

The 2000 FSM Census project provided a wealth of information needed to monitor and evaluate many aspects of the progress in the FSM. Such a project can only be conducted occasionally. The questionnaire, operations and presentation of the 2000 Census were kept consistent with the 1994 Census to ensure that the 2000 information can be compared directly with the 1994 Census. Together, these two censuses provide a comprehensive record of changes that are occurring in our country at this time. It is a rarity for a Pacific Island country to have two consistent and comprehensive censuses conducted so close together in time. It is also the second for the FSM and we who have worked on this project hope that the information will be used to benefit our country.

"Kamagar", "Kinisou Chapur", "Kalahngan" and "Kulo Malulap"

Eneriko Suldan
Assistant Secretary for Statistics

Foreword

This report presents detailed tabulations of data from the 2000 FSM Census of Population and Housing on the population's demographic, social, and economic characteristics. Summary tabulations, including housing characteristics are presented in the Kosrae State Census Report. This report contains text (this foreword and two appendices), a table of contents followed by maps (one combined for the nation, and one for Kosrae State), the detailed tables, and a copy of the questionnaire (Appendix C).

The first set of tables (Tables 1-1 to 1-19) provides the distribution of the population classified by age, sex, ethnicity, place of birth, legal residence and citizenship, educational attainment, labor force participation, work status, industry, occupation, and income. In subsequent series, these and other basic characteristics such as language, household size, fertility, marital status, religion, length of continuous residence, literacy, vocational training, veteran status, economic activities and place of work, etc., are cross-classified by geographic, demographic, social, and economic measures as follows:

- Tables 2-1 to 2-19, Tabulations by Place of Usual Residence
- Tables 3-1 to 3-17, Tabulations by Age
- Tables 4-1 to 4-18, Tabulations by Ethnicity
- Tables 5-1 to 5-18, Tabulations by Place of Birth
- Tables 6-1 to 6-18, Tabulations by Place Legal Residence/Citizenship
- Tables 7-1 to 7-18, Tabulations by Educational Attainment
- Tables 8-1 to 8-16, Tabulations by Occupation
- Tables 9-1 to 9-14, Tabulations by Labor Force Participation
- Tables 10-1 to 10-16, Tabulations by Industry
- Tables 11-1 to 11-18, Tabulations by Income

Each table is uniquely identified by a table number and title. The *stubhead* at the left under the title defines the types of geographic, demographic, or economic category for which data are shown in the particular table, and is part of the table title.

Appendix A provides definitions and explanations for the subject covered in this report. Appendix B explains the residence rules used during the enumeration and describes the data collection and processing procedures. Appendix C contains the 2000 FSM Population and Housing Census Questionnaire.

The content and procedures of the 1994 and 2000 FSM Census were determined based on the 1990 Census of Palau, Guam, American Samoa, and the Northern Mariana Islands, modified to fit the situation in the Federated States of Micronesia. Further information on comparability appears in Appendix A, *Definitions and Explanations*.

More detailed information on the technical and procedural matters are also described in separate analytical reports of the 2000 FSM Census of Kosrae – that is, the 2000 Kosrae State Census Report, available at both the Division of Statistics, Department of Economic Affairs, P.O. Box PS-12, Palikir, Pohnpei, FM 96941 and Kosrae Branch Statistics office. The offices can be reached by email at census@mail.fm or Kostats@mail.fm respectively.

Derived measures

This report presents medians, means, and percentages, as well as certain rates and ratios. The median – a type of average – is the middle value in a distribution; i.e., the median divides the distribution into two equal parts, with one-half of all cases falling below the median and one-half exceeding the median. The median is computed on the basis of the distribution as tabulated, which sometimes more detailed than the distribution shown in this report.

Means are used along with medians, for tabulations on income. The mean income is the sum of all income in a region or characteristic divided by the number of income recipients. Similarly, the aggregate of all incomes in a region can be found by multiplying the mean of the number of persons earning income.

Percents and other derived measures which round to less than 0.1 are not shown but indicated as zero (in this case, that is, “-”).

Symbols

The following symbols are used in the tables:

A dash “-“ represents or a percent which rounds to less than 0.1.

Three dots “...” means not applicable, or information suppressed for reasons of confidentiality.

NA means not available.

APPENDIX A

DEFINITION AND EXPLANATIONS

The definition presented in some sections may not be applicable to the 2000 FSM Census. These sections include: Group Quarters; and Household Type and Relationship. However, it is necessary to keep the definitions for comparison purposes (*for future censuses*). A note is provided in the sections where the definitions may not be applicable.

POPULATION CHARACTERISTICS

AGE

The data on age were derived from answers to questionnaire item 4a. The age classification is based on the age of the person in complete years as of April 1, 2000. The age response in question 4a was used normally to represent a person's age. However, when the age response was unacceptable or unavailable, a person's age was derived from an acceptable year-of-birth response in question 4b.

Data on age are used to determine the applicability of other questions for a person and to classify other characteristics in census tabulations. Age data are needed to interpret most social and economic characteristics used to plan and examine many programs and policies. Therefore, age is tabulated by single years of age and by many different groupings, such as 5 year age groups.

Some tabulations are shown by the age of the householder. These data were derived from the age responses from each householder (*for more information on householder, see the discussion under 'Household Type and Relationship'*).

Median Age - This measure divides the age distribution into two equal parts: one-half of the cases falling below the median value and one-half above the value. Generally, median age is computed on the basis of more detailed age intervals than are shown in some census publications; thus, a median based on a less detailed distribution may differ slightly from a corresponding median for the same population based on a more detailed distribution (*for more information on medians, see the discussion under 'Derived Measures'*).

Limitation of the Data - Counts in 1973 and 1980 for persons 100 years old and over were substantially overstated. Improvements were made in the questionnaire design and in the allocation procedures to attempt to minimize this problem for the 1994 and 2000 Censuses.

Comparability - Age data have been collected in every census conducted in the FSM. The 1994 and 2000 data are not available by quarter year of age. This change was made so that coded information could be obtained for both age and year of birth. Since 1973, assignment of unknown age has been performed by a general procedure describes as '*imputation*.' The specific procedures for imputing age have been different in each Census (*for more information on age imputation, see Chapter 2 of the 2000 National Census Report*).

CITIZENSHIP/LEGAL RESIDENCE

The data on citizenship were derived from answers to questionnaire item 9, which was asked of all persons. The question was based on self-identification. For FSM citizens, the place of legal residence was recorded; thus, FSM person's response to the question represents their place of voting. For Non-FM citizens, their country of citizenship was recorded.

COMMUTING CHARACTERISTICS

Means of Transportation to Work

The data on means of transportation to work were derived from answers to questionnaire item 23a, which was asked of persons who indicated in question 20a that they worked at some time during the reference week (for more information, see discussion under *Reference Week*). Means of transportation to work refers to the principal mode of travel or type of conveyance that the person usually used to get from home to work during the reference week.

Persons who used different means of transportation on different days of the week were asked to specify the one they used most often, that is, the greatest number of days. Persons who used more than one means of transportation to get to work each day were asked to report the one used for the longest distance during the work trip. The category *Car, truck, or private van/bus* includes workers using a car (including company cars but excluding taxicabs), a truck of one-ton capacity or less, or a privately owned van or bus. The category *Public transportation* includes workers who used a boat, public van/bus, or taxicab even if each mode is not shown separately in the tabulation. The category *Other method* includes workers who used a mode of travel that is not identified separately within the data distribution. The category *Other method* may vary from table to table, depending on the amount of detail shown in a particular distribution.

The means of transportation data for some areas may show workers using modes of public transportation that are not available in those areas (for example, taxicab riders in an area where there actually is no taxicab service). This result is largely due to persons who worked during the reference week at a location that was different from their usual place of work (such as persons away from home on business in an area where taxicab service was available) and persons who used more than one means of transportation each day but whose principal means was unavailable where they lived.

Private Vehicle Occupancy (Carpool)

The data on private vehicle occupancy or carpooling were derived from answers to questionnaire item 23b. This question was asked of persons who indicated in question 20a that they worked at some time during the reference week and who reported in question 23a that their means of transportation to work was 'Car, truck, or private van/ bus. (For more information, see discussion under *Reference Week*.)

Private vehicle occupancy refers to the number of persons who usually rode to work in the vehicle during the reference week. The category *Drove alone* includes persons who usually drove alone to work as well as persons driven to work by someone who then drove back home or to a non-work destination. The category *Carpooled* includes workers who reported that two or more persons usually rode to work in the vehicle during the reference week.

In distributions classified by industry, Armed Forces personnel are included in the totals by industry but are not shown separately.

Persons Per Private Vehicle -- This measure is obtained by dividing the number of persons who reported using a car, truck, or private van/bus to get to work by the number of such vehicles that they used. The number of vehicles used is derived by counting each person who drove alone as one vehicle, each person who reported being in a two-person carpool as one-half vehicle, each person who reported being in a three-person carpool as one-third vehicle, and so on, and then summing all the vehicles.

Time Leaving Home to Go to Work

The data on time leaving home to go to work were derived from answers to questionnaire item 24a. This question was asked of persons who indicated in question 20a that they worked at some time during the reference week and who reported in question 23a that they worked outside their home. The departure time refers to the time of day that the person usually left home to go to work during the reference week. (For more information, see discussion under *Reference Week*.)

Travel Time to Work

The data on travel time to work were derived from answers to questionnaire item 24b. This question was asked of persons who indicated in question 20a that they worked at some time during the reference week and who reported in question 23a that they worked outside their home. Travel time to work refers to the total number of minutes that it usually took the person to get from home to work during the reference week. The elapsed time includes time spent waiting for public transportation, picking up passengers in carpools, and time spent in other activities related to getting to work. (For more information, see discussion under *Reference Week*.)

EDUCATIONAL ATTAINMENT

Data on educational attainment were derived from answers to questionnaire item 13. Data are tabulated for persons 15 years old and over. Persons are classified according to the highest grade of school completed or the highest degree received. For persons currently enrolled in school, the question included instructions to report the level of the previous grade attended or the

highest degree received. The question included response categories which allowed persons to report completing the 12th grade without receiving a high school diploma. Respondents were to report as *high school graduate(s)* persons who received either a high school diploma or the equivalent, for example, passed the Test of General Educational Development (G.E.D.), and did not attend college.

Enumerators were instructed that schooling completed in foreign or un-graded school systems should be reported as the equivalent level of schooling in the regular American system; that vocational certificates or diplomas from vocational, trade, or business schools or colleges were not to be reported unless they were college level degrees; and that honorary degrees were not to be reported. The instructions gave *medicine, dentistry, chiropractic medicine, optometry, osteopathic medicine, pharmacy, podiatry, veterinary medicine, law, and theology* as examples of professional school degrees, and specifically excluded *barber school, cosmetology, or other training for a specific trade* from the professional school degree category.

Persons who did not report educational attainment were assigned the attainment of a person of the same age, ethnic origin, and sex residing in the same or a nearby area.

High School Graduate or Higher - Includes persons whose highest degree was a high school diploma or its equivalent, persons who attended college or professional school, and persons who received a college, university, or professional degree. Persons who reported completing the 12th grade but not receiving a diploma are not included.

Not Enrolled, Not High School Graduate - Includes persons of compulsory school attendance age or above who were not enrolled in school and were not high school graduates; these persons may be taken to be *high school dropouts*. There is no restriction on when they *dropped out* of school, and they may have never attended high school.

Percent high school graduate or higher and *Percent bachelor's degree or higher* are summary measures which can be calculated from the present data and offer quite readily interpretable measures of differences between population subgroups. To make comparisons with data from previous censuses, *Percent high school graduate or higher* can be calculated and *Percent bachelor's degree or higher* can be approximated.

Comparability - In the censuses of 1973 through 2000, a two-part question asking highest grade of school attended and whether that grade was finished was used to construct highest grade or year of school completed; except for the mid-1980's censuses of Kosrae, Pohnpei and Yap, where there was no question on education. For persons who have not attended college, the response categories in the 2000 educational attainment question should produce data which are comparable to data on highest grade completed from earlier censuses.

The response categories for persons who have attended college were modified from earlier censuses (1973 and earlier) because there was some ambiguity in interpreting responses in terms of the number of years of college completed. For instance, it was not clear whether *completed the fourth year of college, completed the senior year of college, and college graduate* were synonymous.

EMPLOYMENT STATUS

The data on employment status were derived from answers to questionnaire items 20a, 25, 26, and 27, which were asked of persons 15 years and over. The series of questions on employment status was designed to identify, in this sequence: (a) persons who worked at a job or business or farm at any time during the reference week; (b) persons who did not do such work during the reference week, but who had jobs or businesses from which they were temporarily absent (excluding layoff); (c) persons on layoff; and (d) persons who did not do such work during the reference week, but who were looking for work to earn money during last week and were available for work during the reference week.

From 1973 labor force data on persons (16 years and over) agreed with the official measurement of the labor force as revised in January 1967 by the U.S. Department of Labor. For 1994 and 2000, the employment status data was presented for persons 15 years and over to follow the recommendations of the Conference of Labor Statisticians and other global and regional

recommendations of the United Nations International Labor Organization (ILO). This definition is also followed in other 1994 and 2000 census reports. The 2000 census also shows the U.S. definitions of employment status recode which differ from the UN definitions.

Employed - All civilians 15 years old and over who were either (a) *at work* -- those who did any work at all during the reference week as paid employees or in their own business or profession, or on their own farm, or who worked as unpaid workers on a family farm or in a family business; or (b) were *with a job but not at work* - those who did not do such work during the reference week, but who had jobs or businesses from which they were temporarily absent due to illness, bad weather, industrial dispute, vacation, or other personal reasons. Also included in the employed are the subsistence workers (see the 2000 National Census Report). Excluded from the employed are persons without jobs or businesses whose only activity consisted of work around the house or unpaid volunteer work for religious, charitable, and similar organizations; persons without jobs or businesses during the reference week; and persons on active duty in the United States Armed Forces.

Unemployed -- All civilians 15 years old and over who (a) were neither *at work* nor *with a job but not at work* during the reference week; (b) were looking for work to earn money during the last 4 weeks; and (c) were available to accept a job. Examples of job seeking activities are:

- Registering at a public or private employment office
- Meeting with prospective employers
- Investigating possibilities for starting a professional practice or opening a business
- Placing or answering advertisements
- Writing letters of application
- Being on a union or professional register

Also included as unemployed were civilians 15 years old and over who did not work at a job or business during the reference week and were waiting to be called back to a job from which they had been laid off.

Experienced Unemployed - These are unemployed persons who have worked at any time in the past.

Civilian Labor Force - Consists of persons classified as employed or unemployed in accordance with the criteria described above.

Experienced Civilian Labor Force - Consists of the employed and the experienced unemployed.

Labor Force - All persons classified in the civilian labor force plus members of the Armed Forces (persons on active duty with the United States Army, Air Force, Navy, Marine Corps, or Coast Guard).

Not in Labor Force - All persons 15 years old and over who were not classified as members of the labor force. This category consists mainly of students, housewives, retired workers, seasonal workers enumerated in an 'off' season who were not looking for work, institutionalized persons, and persons doing only incidental unpaid family work.

Subsistence Activity - A person is engaged in subsistence activities if he or she mainly produced goods for his or her own or family's use and needs, such as growing/gathering food, fishing, cutting copra for home use, raising livestock, making handicrafts for home use, and other productive activities not primarily for commercial purposes. Persons engaged in subsistence activities are included in the labor force (see definition of *employed*).

Worker - This term appears in connection with several subjects, for example, commuting items, class of worker, weeks worked in 1999, and workers in family in 1999. Its meaning varies and, therefore, should be determined in each case by referring to the definition of the subject in which it appears.

Actual Hours Worked Last Week -- All persons who reported working at a job or business or farm during the reference week were asked to report in questionnaire item 21 the number of hours that they worked, excluding any time at subsistence activity. The statistics on hours worked for *employed, at work* persons pertain to the number of hours actually worked at all jobs, and do not necessarily reflect the number of hours typically or usually worked or the scheduled number of hours. The concept of *actual hours* differs from that of *usual hours worked* described below. The number of persons who worked only a small number of hours is probably understated since such persons sometimes consider themselves as not working. Respondents were asked to include overtime or extra hours worked, but to exclude lunch hours, sick leave, and vacation leave.

Limitation of the Data - The census may understate the number of employed persons because persons who have irregular, casual, or unstructured jobs sometimes report themselves as not working. The number of employed persons *at work* is probably overstated in the census (and conversely, the number of employed *with a job but not at work* is understated) since some persons on vacation or sick leave erroneously report themselves as working. This problem has no effect whatsoever on

the total number of employed persons. The reference week for the employment data is not the same for all persons. This lack of a uniform reference week may mean that the employment data do not reflect the reality of the employment situation of any given week. (For more information, see the discussion under *Reference Week*.)

Comparability - The questionnaire items and employment status concepts for the 1994 and 2000 censuses were essentially the same as those used in the 1980 census. However, the data are not completely comparable because of different definitions. The 1980 and one definition for 2000 census considered persons ages 16 and over in the labor force; also subsistence workers were not considered part of the labor force.

Since employment data from the census are obtained from respondents in households, they differ from statistics based on reports from individual business establishments, farm enterprises, and certain government programs. Persons employed at more than one job are counted only once in the census and are classified according to the job at which they worked the greatest number of hours during the reference week. In statistics based on reports from business and farm establishments, persons who work for more than one establishment may be counted more than once. Moreover, other series, unlike those presented here, may exclude private household workers, unpaid family workers, and self-employed persons, but may include workers less than 15 years of age.

An additional difference in the data arises because persons who had a job but were not at work are included with the employed in the statistics shown here, whereas many of these persons are likely to be excluded from employment figures based on establishment payroll reports. Furthermore, the employment status data in this report include persons on the basis of place of residence regardless of where they work, whereas establishment data report persons at their place of work regardless of where they live. This latter consideration is particularly significant when comparing data for workers who commute between areas. Census data on hours worked during the reference week may differ from data from other sources. The census measures hours actually worked, whereas some surveys measure hours paid for by employers.

For several reasons, the unemployment figures of the Census are not comparable with published figures on unemployment compensation claims. For example, figures on unemployment compensation claims exclude persons who have exhausted their benefit rights, new workers who have not earned rights to unemployment insurance, and persons losing jobs not covered by unemployment insurance systems (including some workers in agriculture, domestic services, and religious organizations, and self-employed and unpaid family workers). In addition, the qualifications for drawing unemployment compensation differ from the definition of unemployment used by the Census. Persons working only a few hours during the week and persons with a job but not at work are sometimes eligible for unemployment compensation but are classified as 'employed' in the census reports. Differences in the geographical distribution of unemployment data arise because the place where claims are filed may not necessarily be the same as the place of residence of the unemployed worker.

ETHNIC ORIGIN OR RACE

The data on ethnic origin or race were derived from the answers to questionnaire item 6. The question was based on self-identification and was open-ended (respondents were required to provide the answer). Ethnic origin or race refers to a person's origin or descent, roots, heritage, or place where the person or the person's parents or ancestors were born. Persons reported their ethnic group regardless of the number of generations removed from their place of origin. Responses to the ethnic origin question reflected the ethnic group(s) with which persons identified and not necessarily the degree of attachment or association the persons had with the particular group(s).

Ethnic origin or race is different from other population characteristics that are sometimes regarded as indicators of ethnicity, namely country of birth and language spoken at home. Respondents had an option of reporting their ethnic origin or race by specifying single or multiple (two) ethnic groups. Responses were coded by a procedure that allowed for identification of the first response reported.

In published tabulations, multiple groups are designated in general open-ended categories such as *Yapese and other*, rather than in specific multiple ethnic groups such as *Yapese-Chuukese*. A person who reported *Yapese-Chuukese* ethnicity, for example, is included in the *Yapese and other* group and in the category *Chuukese and other*. A few responses consisting of

two terms (for example, French Canadian) were considered as a single group and, thus, were coded and tabulated as a single ethnicity.

If a person reported “Chuukese-Mortlockese”, however, the person would be tallied twice in “Chuukese and other”, so that the sum of responses sometimes is greater than the total of persons reporting multiple groups.

Certain combinations of ethnic groups where the ancestry group is a part of another, such as *German-Bavarian*, the response was coded as a single ancestry using the smaller group *Bavarian*. Also, responses such as *Polish-American* or *Italian-American* were tabulated as a single entry (that is, *Polish* or *Italian*). American was accepted as a unique ethnicity if it was given alone, with an ambiguous response, or with State names. If the respondent listed any other ethnic identity such as *Chamorro-American*, generally the *American* portion of the response was not coded.

Comparability - A question on ethnic origin or race was first asked as an open-ended item in the 1980 census. In 1994 and 2000, although respondents were allowed to report two ethnic groups, and both ethnic groups identified were coded. The 2000 ethnic origin or race data were imputed using information from other items (parental birthplace and language), other members of the housing unit, or other persons in nearby housing units.

RELIGION

Religion was defined as religious or spiritual belief or preference, regardless of whether this belief was represented by an organized group. The data on religion were derived from the answers to questionnaire item 7. The response categories of religion were as follows: (1) Roman Catholic; (2) Congregation; (3) Latter Day Saints (LDS) or Mormons; (4) Seventh Day Adventist (SDA); (5) Baptist; (6) Other Religion; (7) Refused; and (8) No religion.

In the tabulated tables, *congregational*, *SDA*, *Baptist*, and some religions from the *other religion* category (i.e., Pentacostal, Assembly of God, etc.) were grouped as *Protestants*. The number for the *Protestant* and *other religion* categories may vary between tables. In such cases, some of the categories under *Protestant* were added to *other religion* due to limited space.

FERTILITY

The data on fertility were derived from answers to questionnaire items 17a through 17d, which was asked of women 13 years old and over regardless of marital status. Stillbirths, stepchildren, and adopted children were excluded from the number of children ever born (17a). Ever-married women were instructed to include all children born to them before and during their most recent marriage, children no longer living, and children away from home, as well as children who were still living in the home. Never-married women were instructed to include all children born to them.

Data on children ever born were obtained by combining responses, by sex, for children living at home, children living elsewhere, and children who have died.

Women who had no children were not asked questions about a last child. For all others, enumerators requested the date of last birth (17b), sex of the last child (17c), and vital statistics of that child (17d).

Data are most frequently presented in terms of the aggregate number of children ever born to women in the specified category and in terms of the rate per 1,000 women.

Comparability - The wording of the question on children ever born was the same in 2000 as in 1980 and 1994. In 1973, the terminal category was *12 or more* children ever born. In virtually all of the tables in 1973 census volumes, data presented on children ever born to all women assumed that single women were childless, even though it was known that some of the women have had children. Data presented for children ever born for 1980, 1994, and 2000 reports are comparable as well as all tables for all census years which show data for ever-married women.

GROUP QUARTERS

All persons not living in households are classified by the Census as living in group quarters. Two general categories of persons in group quarters are recognized: (1) institutionalized persons and (2) other persons in group quarters (also referred to as *non-institutional group quarters*).

Institutionalized Persons -- Includes persons under formally authorized, supervised care or custody in institutions at the time of enumeration. Such persons are classified as *patients or inmates* of an institution regardless of the availability of nursing or medical care, the length of stay, or the number of persons in the institution. Generally, institutionalized persons are restricted to the institutional buildings and grounds (or must have passes or escorts to leave) and thus have limited interaction with the

surrounding community. Also, they are generally under the care of trained staff who have responsibility for their safekeeping and supervision.

Type of Institution - The type of institution was determined as part of census enumeration activities. For institutions, which specialize in only one specific type of service, all patients or inmates were given the same classification. For institutions which had multiple types of major services (usually general hospitals and Veterans' Administration hospitals), patients were classified according to selected types of wards. For example, in psychiatric wards of hospitals, patients were classified in *mental (psychiatric) hospitals*; in hospital wards for persons with chronic diseases, patients were classified in *hospitals for the chronically ill*. Each patient or inmate was classified in only one type of institution. Institutions include the types listed below. Some of the institution types presented here may not be applicable to the 1994 and 2000 censuses, but for comparison purposes (to future upcoming censuses) they are retained.

Correctional Institutions -- Includes prisons, Federal detention centers, military stockades and jails, police lockups, halfway houses, local jails, and other confinement facilities, including work farms.

Mental (Psychiatric) Hospitals - Includes hospitals or wards for the criminally insane not operated by a prison, and psychiatric wards of general hospitals and veterans' hospitals. Patients receive supervised medical/nursing care from formally-trained staff. In some census products, nursing homes are classified by type of ownership as *Federal, State or local, Private, and Ownership not known*.

Hospitals for Chronically Ill - Includes hospitals for patients who require long-term care, including those in military hospitals and wards for the chronically ill located on military bases; or other hospitals or wards for the chronically ill, which include tuberculosis hospitals or wards, wards in general and Veterans' Administration hospitals for the chronically ill, neurological wards, hospices, wards for patients with Hansen's Disease (leprosy) and other incurable diseases, and other unspecified wards for the chronically ill. Patients who had no usual home elsewhere were enumerated as part of the institutional population in the wards of general and military hospitals. Most hospital patients are at the hospital temporarily and were enumerated at their usual place of residence. (For more information, see *Wards in General and Military Hospitals for Patients Who Have No Usual Home Elsewhere*.)

Schools, Hospitals, or Wards for the Mentally Retarded - Includes those institutions such as wards in hospitals for the mentally retarded, and intermediate-care facilities for the mentally retarded that provide supervised medical/nursing care from formally-trained staff. In some census products, this category is classified by type of ownership as *Federal, State or local, Private, and Ownership not known*.

Schools, Hospitals, or Wards for the Physically Handicapped - Includes three types of institutions: institutions for the blind, those for the deaf, and orthopedic wards and institutions for the physically handicapped. Institutions for persons with speech problems are classified with *institutions for the deaf*. The category *orthopedic wards and institutions for the physically handicapped* includes those institutions providing relatively long-term care to accident victims, and to persons with polio, cerebral palsy, and muscular dystrophy. In some census products, this category is classified by type of ownership as *Public, Private, and Ownership not known*.

Hospitals, and Wards for Drug/Alcohol Abuse - Includes hospitals, and hospital wards in psychiatric and general hospitals. These facilities are equipped medically and designed for the diagnosis and treatment of medical or psychiatric illnesses associated with alcohol or drug abuse. Patients receive supervised medical care from formally-trained staff.

Other Persons in Group Quarters (also referred to as *non-institutional group quarters*) - Includes all persons who live in group quarters other than institutions. Persons who live in the following living quarters are classified as *other persons in group quarters* when there are 10 or more unrelated persons living in the unit; otherwise, these living quarters are classified as housing units.

Rooming Houses - Includes persons residing in rooming and boarding houses and living in quarters with 10 or more unrelated persons.

Group Homes - Includes *community-based homes* that provide care and supportive services. Such places include homes for the mentally ill, mentally retarded, and physically handicapped; drug/alcohol halfway houses; and communes.

Religious Group Quarters - Includes, primarily, group quarters for nuns teaching in parochial schools and for priests living in rectories. It also includes other convents and monasteries, except those associated with a general hospital or an institution.

Persons residing in certain other types of living arrangements are classified as living in *non-institutional group quarters* regardless of the number of people sharing the unit. These include persons residing in the following types of group quarters:

College Dormitories - Includes college students in dormitories (provided the dormitory is restricted to students who do not have their families living with them), fraternity and sorority houses, and on-campus residential quarters used exclusively for those in religious orders who are attending college. Students in privately-owned rooming and boarding houses off campus are also included, if the place is reserved exclusively for occupancy by college-level students and if there are 10 or more unrelated persons.

Military Quarters - Includes military personnel living in barracks and dormitories on base, in transient quarters on base for temporary residents (both civilian and military), and on military ships. However, patients in military hospitals receiving treatment for chronic diseases or who had no usual home elsewhere, and persons being held in military stockades were included as part of the institutional population.

Other Workers' Dormitories - Includes persons in logging camps, construction workers' camps, firehouse dormitories, job-training camps and non-farm migratory workers' camps.

Crews of Maritime Vessels - Includes officers, crew members, and passengers of maritime U.S. flag vessels. All ocean-going ships are included.

Staff Residents of Institutions - Includes staff residing in group quarters on institutional grounds who provide formally-authorized, supervised care or custody for the institutionalized population.

Comparability - For the 1994 and 2000 Censuses, the definition of institutionalized persons was revised so that the definition of *care* only includes persons under organized medical or formally-authorized, supervised care or custody. As a result of this change to the institutional definition, maternity homes are classified as non-institutional rather than institutional group quarters as in previous censuses. The following types of other group quarters are classified as institutional rather than non-institutional group quarters: *halfway houses (operated for correctional purposes)* and *wards in general and military hospitals for patients who have no usual home elsewhere*, which includes maternity, neonatal, pediatric, military, and surgical wards of hospitals, other-purpose wards of hospitals, and wards for infectious diseases. These changes should not significantly affect the comparability of data with earlier censuses because of the relatively small number of persons involved.

As in 1980, 10 or more unrelated persons living together were classified as living in non-institutional group quarters.

Several changes also have occurred in the identification of specific types of group quarters. The 1994 and 2000 censuses identify separately the following types of correctional institutions: persons in halfway houses (operated for correctional purposes), military stockades and jails, and police lockups. In 2000, tuberculosis hospitals or wards are included with hospitals for the chronically ill; in 1980, they were shown separately. For 2000, the non-institutional group quarters category *Group homes* is further classified as: group homes for drug/alcohol abuse; maternity homes (for unwed mothers), group homes for the mentally ill, group homes for the mentally retarded, and group homes for the physically handicapped. Persons living in communes, foster-care homes, and job corps centers are classified with *Other group homes* only if 10 or more unrelated persons share the unit; otherwise, they are classified as housing units.

In 1994 and 2000, workers' dormitories were classified as group quarters regardless of the number of persons sharing the dorm. In 1980, 10 or more unrelated persons had to share the dorm for it to be classified as a group quarters.

In 1994 and 2000 census data products, the phrase *inmates of institutions* was changed to *institutionalized persons*. Also, persons living in non-institutional group quarters were referred to as *other persons in group quarters*, and the phrase *staff residents* was used for staff living in institutions.

In 1994 and 2000, there are additional institutional categories and non-institutional group quarters categories compared with the 1980 census. The institutional categories added include *hospitals and wards for drug/alcohol abuse* and *military hospitals*

for the chronically ill. The non-institutional group quarters categories added include *emergency shelters for homeless persons* and *shelters for abused women*.

HOUSEHOLD TYPE AND RELATIONSHIP

Household

A household includes all the persons who occupy a housing unit. A housing unit is a house, an apartment, a mobile home, a group of rooms, or a single room that is occupied (or if vacant, is intended for occupancy) as separate living quarters. Separate living quarters are those in which the occupants live and eat separately from any other persons in the building and which have direct access from the outside of the building or through a common hall. The occupants may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated persons who share living arrangements. The count of households or householders always equals the count of occupied housing units.

Persons Per Household -- A measure obtained by dividing the number of persons in households by the number of households (or householders). In cases where persons in households are cross-classified by ethnic origin or race, persons in the household are classified by the ethnic origin or race of the householder rather than the ethnic origin or race of each individual.

Relationship to Householder

Householder - The data on relationship to householder were derived from answers to questionnaire item 2, which was asked of all persons in housing units. One person in each household is designated as the householder. In most cases, this is the person, or one of the persons, in whose name the home is owned, being bought, or rented and who is listed as person 1 on the census questionnaire. If there is no such person in the household, any adult household member 15 years old and over could be designated as the householder.

Households are classified by type according to the sex of the householder and the presence of relatives. Two types of householders are distinguished: a *family householder* and a *non-family householder*. A family householder is a householder living with one or more persons related to him or her by birth, marriage, or adoption. The householder and all persons in the household related to him or her are family members. A non-family householder is a householder living alone or with non-relatives only.

Spouse - Includes a person married to and living with a householder. This category includes persons in formal marriages, as well as persons in common-law marriages.

The number of spouses is equal to the number of *married-couple families* or *married-couple households*. The number of spouses, however, is generally less than half of the number of *married persons with spouse present*, since more than one married couple can live in a household, but only spouses of householders are specifically identified as *spouse*. The number of *married persons with spouse present* includes married-couple subfamilies and married-couple families.

Child -- Includes a son or daughter by birth, a stepchild, or adopted child of the householder, regardless of the child's age or marital status. The category excludes sons-in-law, daughters-in-law, and foster children.

Natural-Born or Adopted Son/Daughter - A son or daughter of the householder by birth, regardless of the age of the child. Also, this category includes sons or daughters of the householder by legal adoption, regardless of the age of the child. If the stepson/stepdaughter of the householder has been legally adopted by the householder, the child is still classified as a stepchild.

Stepson/Stepdaughter - A son or daughter of the householder through marriage but not by birth, regardless of the age of the child. If the stepson/stepdaughter of the householder has been legally adopted by the householder, the child is still classified as a stepchild.

Own Child - A never-married child under 18 years who is a son or daughter by birth, a stepchild, or an adopted child of the householder. In certain tabulations, own children are further classified as living with two parents or with one parent only. Own children of the householder living with two parents are by definition found only in married-couple families.

In a subfamily, an *own child* is a never-married child under 18 years of age who is a son, daughter, stepchild, or an adopted child of a mother in a mother-child subfamily, a father in a father-child subfamily, or either spouse in a married-couple subfamily.

Related children in a family include own children and all other persons under 18 years of age in the household, regardless of marital status, who are related to the householder, except the spouse of the householder. Foster children are not included since they are not related to the householder.

Other Relatives - In tabulations, includes any household member related to the householder by birth, marriage, or adoption, but not included specifically in another relationship category. In certain detailed tabulations, the following categories may be shown:

Grandchild -- The grandson or granddaughter of the householder.

Brother/Sister - The brother or sister of the householder, including stepbrothers, stepsisters, and brothers and sisters by adoption. Brothers-in-law and sisters-in-law are included in the *Other relative* category on the questionnaire.

Parent -- The father or mother of the householder, including a stepparent or adoptive parent. Fathers-in-law and mothers-in-law are included in the *Other relative* category on the questionnaire.

Other Relatives - Anyone not listed in a reported category above who is related to the householder by birth, marriage, or adoption (brother-in-law, grandparent, nephew, aunt, mother-in-law, daughter-in-law, cousin, and so forth).

Non-relatives - Includes any household member, including foster children not related to the householder by birth, marriage, or adoption.

When relationship is not reported for an individual, it is imputed according to the responses for age, sex, and marital status for that person while maintaining consistency with responses for other individuals in the household. (For more information on relationship imputation, see the National Census Report.)

Unrelated Individual

An unrelated individual is: (1) a householder living alone or with non-relatives only, (2) a household member who is not related to the householder, or (3) a person living in group quarters who is not an inmate of an institution.

Family Type

A family consists of a householder and one or more other persons living in the same household who are related to the householder by birth, marriage, or adoption. All persons in a household who are related to the householder are regarded as members of his or her family. A household can contain only one family for purposes of census tabulations. Not all households contain families since a household may comprise a group of unrelated persons or one person living alone.

Families are classified by type as either a *married-couple family* or *other family* according to the sex of the householder and the presence of relatives. The data on family type are based on answers to questions on sex and relationship.

Married-Couple Family - A family in which the householder and his or her spouse are enumerated as members of the same household.

Male Householder, No Wife Present - A family with a male householder and no spouse of householder present.

Female Householder, No Husband Present -- A family with a female householder and no spouse of householder present.

Persons Per Family - A measure obtained by dividing the number of persons in families by the total number of families (or family householders). In cases where the measure, *persons in family* or *persons per family* are cross-tabulated by ethnic origin or race, the ethnic origin or race refers to the householder rather than the ethnic origin or race of each individual.

Subfamily

A subfamily is a married couple (husband and wife enumerated as members of the same household) with or without never-married children under 18 years old, or one parent with one or more never-married children under 18 years old, living in a household and related to, but not including, either the householder or the householder's spouse. The number of subfamilies is not included in the count of families, since subfamily members are counted as part of the householder's family.

Subfamilies are defined during processing. In selected tabulations, subfamilies are further classified by type: married-couple subfamilies, with or without own children; mother-child subfamilies; and father-child subfamilies.

Lone parents include people maintaining either one-parent families or one-parent subfamilies. Married couples include husbands and wives in both married-couple families and married-couple subfamilies.

Unmarried-Couple Household

An unmarried-couple household is composed of two unrelated adults of the opposite sex (one of whom is the householder) who share a housing unit with or without the presence of children under 15 years old.

Stepfamily

A stepfamily is a *married-couple family* with at least one stepchild of the householder present, where the householder is the husband.

Comparability - The 1994 and 2000 definitions of a household is the same as that used in 1980. The 1980 relationship category *Son/daughter* has been replaced by two categories, *Natural-born or adopted son/daughter* and *Stepson/stepdaughter*. *Grandchild* has been added as a separate category.

INCOME IN 1999

The data on income in 1999 were derived from answers to questionnaire items 32 and 33. Information on money income received in the calendar year 1999 was requested from persons 15 years old and over. Income referred to cash receipt only. That is, *total income* is the algebraic sum of the amounts reported separately for wage or salary income; net non-farm self-employment and farm self-employment income; interest, dividend, or net rental or royalty income; Social Security or railroad retirement income; public assistance or welfare income; retirement or disability income; remittance income; and all other income. *Earnings* is defined as the algebraic sum of wage or salary income and net income from farm and non-farm self-employment. *Earnings* represent the amount of income received regularly before deductions for personal income taxes, Social Security, bond purchases, union dues, medicare deductions, etc.

Receipts from the following sources are not included as income: money received from the sale of property (unless the recipient was engaged in the business of selling such property); the value of income *in kind* from food stamps, public housing subsidies, medical care, employer contributions for persons, etc.; withdrawal of bank deposits; money borrowed; tax refunds; exchange of money between relatives living in the same household; gifts and lump-sum inheritances, insurance payments, and other types of lump-sum receipts.

Income Type in 1999

The six types of income reported in the census are defined as follows:

1. **Wage or Salary Income** - Includes total money earnings received for work performed as an employee during the calendar year 1999. It includes wages, salary, Armed Forces pay, commissions, tips, piece-rate payments, and cash bonuses earned before deductions were made for taxes, bonds, pensions, union dues, etc.
2. **Self-Employment Income** - Non-farm self-employment income includes net money income (gross receipts minus expenses) from one's own business, professional enterprise, or partnership. Gross receipts include the value of all goods sold and services rendered. Expenses includes costs of goods purchased, rent, heat, light, power, depreciation charges, wages and salaries paid, business taxes (not personal income taxes), etc. Farm self-employment income includes net money income (gross receipts minus operating expenses) from the operation of a farm by a person on his

or her own account, as an owner, renter, or sharecropper. Gross receipts include the value of all products sold, government farm programs, money received from the rental of farm equipment to others, and incidental receipts from the sale of wood, sand, gravel, etc. Operating expenses include cost of feed, fertilizer, seed, and other farming supplies, cash wages paid to farmhands, depreciation charges, cash rent, interest on farm mortgages, farm building repairs, farm taxes (not personal income taxes), etc. The value of fuel, food, or other farm products used for family living is not included as part of net income.

3. Interest, Dividend, or Net Rental Income - Includes interest on savings or bonds, dividends from stockholdings or membership in associations, net income from rental of property to others and receipts from boarders or lodgers, net royalties, and periodic payments from an estate or trust fund.

4. Social Security Income, Retirement or Disability Income -- Includes (1) Social Security pensions and survivors benefits and permanent disability insurance payments made by the Social Security Administration prior to deductions for medical insurance, and railroad retirement insurance checks from the U.S. Government. Medicare reimbursements are not included; (2) retirement pensions and survivor benefits from a former employer, labor union, or Federal, State, county, or other governmental agency; (3) disability income from sources such as worker's compensation; companies or unions; Federal, State, or local government; and the U.S. military; (4) periodic receipts from annuities and insurance; and (4) regular income from IRA and KEOGH plans.

5. Remittance Income - Includes money received from relatives who are (1) civilians living outside the household or (2) in the military outside the household; for example, allotments.

6. All Other Income - Includes unemployment compensation, Veterans' Administration (VA) payments, alimony and child support, contributions received periodically from persons not living in the household, military family allotments, net gambling winnings, and other kinds of periodic income other than earnings.

Income of Households -- Includes the income of the householder and all other persons 15 years old and over in the household, whether related to the householder or not. Because many households consist of only one person, average household income is usually less than average family income.

Income of Families and Persons - In compiling statistics on family income, the incomes of all members 15 years old and over in each family are summed and treated as a single amount. However, for persons 15 years old and over, the total amounts of their own incomes are used. Although the income statistics covered the calendar year 1999, the characteristics of persons and the composition of families refer to the time of enumeration (April 2000). Thus, the income of the family does not include amounts received by persons who were members of the family during all or part of the calendar year 1999 if these persons no longer resided with the family at the time of enumeration. Yet, family income amounts reported by related persons who did not reside with the family during 1999 but who were members of the family at the time of enumeration are included. However, the composition of most families was the same during 1999 as in April 2000.

Median Income - The median divides the income distribution into two equal parts, one having incomes above the median and the other having incomes below the median. For households and families, the median income is based on the distribution of the total number of units including those with no income. The median for persons is based on persons with income. The median income values for all households, families, and persons are computed on the basis of more detailed income intervals than shown in most tabulations. Median income figures are calculated using linear interpolation.

Mean Income -- This is the amount obtained by dividing the total income of a particular statistical universe by the number of units in that universe. Thus, mean household income is obtained by dividing total household income by the total number of households. For the various types of income the means are based on households having those types of income. *Per capita income* is the mean income computed for every man, woman, and child in a particular group. It is derived by dividing the total income of a particular group by the total population in that group.

Care should be exercised in using and interpreting mean income values for small subgroups of the population. Because the mean is influenced strongly by extreme values in the distribution, it is especially susceptible to the effects of misreporting and processing errors. The median, which is not affected by extreme values, is, therefore, a better measure than the mean when the population base is small. The mean, nevertheless, is shown in some data products for most small subgroups because, when weighted according to the number of cases, the means can be added to obtained summary measures for areas and groups other than those shown in census tabulations.

Limitation of the Data - Since questionnaire entries for income frequently are based on memory and not on records, many persons tend to forget minor or irregular sources of income and, therefore, underreport their income. Underreporting tends to be more pronounced for income sources that are not derived from earnings, such as Social Security, or from interest, dividends, and net rental income.

There are errors of reporting due to the misunderstanding of the income questions such as reporting gross rather than net dollar amounts for the two questions on net self-employment income, which resulted in an overstatement of these items. Another common error is the reporting of identical dollar amounts in two of the six types of income items where a respondent with only one source of income assumed that the second amount should be entered to represent total income. Such instances of over-reporting had an impact on the level of mean farm or non-farm self-employment income and mean total income published for the various geographical subdivisions of the area.

Extensive computer editing procedures were instituted in the data processing operation to reduce some of these reporting errors and to improve the accuracy of the income data. These procedures corrected various reporting deficiencies and improved the consistency of reported income items associated with work experience and information on occupation and class of worker. For example, if persons reported they were self-employed on their own farm, not incorporated, but had reported wage and salary earnings only, the latter amount was shifted to net self-employment income. Also, if any respondent reported total income only, the amount was generally assigned to one of the type of income items according to responses to the work experience and class-of-worker questions. Another type of problem involved non-reporting of income data. Where income information was not reported, procedures were devised to impute appropriate values with either no income or positive or negative dollar amounts for the missing entries. (For more information on income imputation, see the National Census Report.)

In income tabulations for households and families, the lowest income group (for example, less than \$2,500) includes units that were classified as having no 1999 income. Many of these were living on income *in kind*, savings, or gifts, were newly created families, or families in which the sole breadwinner had recently died or left the household. However, many of the households and families who reported no income probably had some money income which was not recorded in the census. Some may have been living from subsistence activity only.

The income data presented in the tabulations covers money income only. The fact that many farm families receive an important part of their income in the form of *free* housing and goods produced and consumed on the farm rather than in money should be taken into consideration in comparing the income of farm and non-farm residents. Non-money income such as business expense accounts, use of business transportation and facilities, or partial compensation by business for medical and educational expenses was also received by some non-farm residents. Many low income families also receive income *in kind* from public welfare programs. In comparing income data for 1999 with earlier years, it should be noted that an increase or decrease in money income does not necessarily represent a comparable change in real income, unless adjustments for changes in prices are made.

Comparability - The income data collected in the 1980 census are similar to the 1994 and 2000 Census data, but there are variations in the detail of the questions. In 1980, each person was required to report:

- Wage or salary income
- Net non-farm self-employment income
- Net farm self-employment income
- Interest, dividend, or net rental or royalty income
- Social Security income

- Public assistance income
- Income from all other sources

Between the 1980, 1994 and 2000 Censuses, there were minor differences in the processing of the data. In both censuses, all persons with missing values in one or more of the detailed type of income items and total income were designated as allocated. Each missing entry was imputed either as a *no* or as a dollar amount. If total income was reported and one or more of the type of income fields was not answered, then the entry in total income generally was assigned to one of the income types according to the socioeconomic characteristics of the income recipient. This person was designated as unallocated. In 1980, 1994 and 2000, all non-respondents with income not reported (whether heads of households or other persons) were assigned the reported income of persons with similar characteristics. (For more information on income imputation, see the National Census Report.) If a person reported a dollar amount in wage or salary, net non-farm self-employment income, or net farm self-employment

income, the person was considered as unallocated only if no further dollar amounts were imputed for any additional missing entries.

INDUSTRY, OCCUPATION, AND CLASS OF WORKER

The data on industry, occupation, and class of worker were derived from answers to questionnaire items 28, 29, and 30 respectively. Information on industry relates to the kind of business conducted by a person's employing organization; occupation describes the kind of work the person does on the job.

For employed persons, the data refer to the person's job during the reference week. For those who worked at two or more jobs, the data refer to the job at which the person worked the greatest number of hours. For unemployed persons, the data refer to their last job. The industry and occupation statistics are derived from the detailed classification systems developed for the 1994 and 2000 Censuses as described below. The Classified Index of Industries and Occupations provides additional information on the industry and occupation classification systems.

Respondents provided the data for the tabulations by reporting descriptions of their industry and occupation. These descriptions were referred to coding clerical staff in the Division of Statistics for coding. The coding staff converted the written questionnaire descriptions to codes by comparing these descriptions to entries in the Alphabetical Index of Industries and Occupations.

Industry

The industry classification system developed for the 1994 and 2000 Censuses consist of 235 categories for employed persons, classified into 13 major industry groups. Since 1958, the industrial classification was based on the Standard Industrial Classification Manual (SIC). The 1994 and 2000 Census classification was developed from the 1987 SIC published by the Office of Management and Budget, Executive Office of the President.

The SIC was designed primarily to classify establishments by the type of industrial activity in which they were engaged. However, census data, which were collected from households, differ in detail and nature from those obtained from establishment surveys. Therefore, the census classification systems, while defined in SIC terms, cannot reflect the full detail in all categories. There are several levels of industrial classification found in census products.

Occupation

The occupational classification system developed for the 1994 and 2000 Censuses consisted of 500 specific occupational categories for employed persons arranged into 6 summary and 13 major occupational groups. This classification was developed to be consistent with the Standard Occupational Classification (SOC) Manual: 1980, published by the Office of Federal Statistical Policy and Standards, U.S. Department of Commerce. Tabulations with occupation as the primary characteristic present several levels of occupational detail.

Some occupation groups are related closely to certain industries. Operators of transportation equipment, farm operators and workers, and private household workers account for major portions of their respective industries of transportation, agriculture, and private households. However, the industry categories include persons in other occupations. For example, persons employed in agriculture include truck drivers and bookkeepers; persons employed in the transportation industry include mechanics, freight handlers, and payroll clerks; and persons employed in the private household industry include occupations such as chauffeur, gardener, and secretary.

Class of Worker

The data on class of worker were derived from answers to questionnaire item 30. The information on class of worker refers to the same job as a respondent's industry and occupation and categorizes persons according to the type of ownership of the employing organization. The class of worker categories are defined as follows:

Private Wage and Salary Workers - Includes persons who worked for wages, salary, commission, tips, pay-in-kind, or piece rates for a private for profit employer or a private not-for-profit, tax-exempt or charitable organization. Self-employed persons whose business was incorporated are included with private wage and salary workers because they are paid employees of their own companies. Some tabulations present data separately for these subcategories: *For profit*, *Not for profit*, and *Own business incorporated*.

Employees of foreign governments, the United Nations, or other formal international organizations were classified as *Private-not-for-profit*.

Government Workers - Includes persons who were employees of any local, territorial, or Federal governmental unit, regardless of the activity of the particular agency. For some tabulations, the data are presented separately for the three levels of government (municipal, state, and national).

Self-Employed Workers -- Includes persons who worked for profit or fees in their own unincorporated business, profession, or trade, or who operated a farm.

Unpaid Family Workers - Includes persons who worked without pay in a business or on a farm operated by a relative.

Salaried/Self-Employed - In tabulations that categorize persons as either salaried or self-employed, the salaried category includes private and government wage and salary workers; self-employed includes self-employed persons and unpaid family workers.

The industry category *Public administration* is limited to regular government functions such as legislative, judicial, administrative, and regulatory activities of governments. Other government organizations such as schools, hospitals, liquor stores, and bus lines are classified by industry according to the activity in which they are engaged. On the other hand, the class of worker government categories include all government workers.

Occasionally respondents supplied industry, occupation, or class of worker descriptions which are not sufficiently specific for precise classification or did not report on these items at all. Some of these cases were corrected through the field editing process and during the coding and tabulation operations. In the coding operation, certain types of incomplete entries were corrected using the Alphabetical Index of Industries and Occupations. For example, it was possible in certain situations to assign an industry code based on the occupation reported.

Following the coding operations, there was a computer edit and an allocation process. The edit first determined whether a respondent was in the universe which required an industry and occupation code. The codes for the three items (industry, occupation, and class of worker) were checked to ensure they were valid and were edited for their relation to each other. Invalid and inconsistent codes were either blanked or changed to a consistent code.

If one or more of the three codes were blank after the edit, a code was assigned from a *similar* person based on other items such as age and sex. If all the labor force and income data also were blank, all these economic items were assigned from one other person who provided all the necessary data.

Comparability - Comparability of industry and occupation data was affected by a number of factors, primarily the systems used to classify the questionnaire responses. For both the industry and occupation classification systems in the past changes in the individual categories limited comparability of the data from one census to another. These changes were needed to recognize the *birth* of new industries and occupations, the *death* of others, and the growth and decline in existing industries and occupations, as well as the desire of analysts and other users for more detail in the presentation of the data. Probably the

greatest cause of incomparability is the movement of a segment of a category to a different category in the next census. Changes in the nature of jobs and respondent terminology, and refinement of category composition made these movements necessary.

In the 1994 and 2000 Censuses, the industry classification had minor revisions to reflect recent changes to the SIC. The 1994 occupational classification system is essentially the same as that for the 1980 census. However, the conversion of the census classification to the SOC in 1980 meant that the 1994 classification system was less comparable to the classifications used prior to the 1980 Census.

Other factors that affected data comparability included the universe to which the data referred (in 1994, the age cutoff for UN definition labor force was changed from 16 years to 15 years but was 16 for the U.S. definition), how the industry and occupation questions were worded on the questionnaire (improvements in the coding procedures, and how the *not reported* cases are handled). The following publications contain information on the various factors affecting comparability and are particularly useful for understanding differences in the occupation and industry information from earlier censuses. For 1980, see the 1980 Census of Population report, PC80-1-D, Detailed Population Characteristics. The 1994 and 2000

definitions follow the recommendations of the Conference of Labor Statisticians and the global and regional recommendations of the United Nations International Labor Organization (ILO). The definitions differ from the U.S. Bureau of Census labor force definitions in two ways. First the U.S. definition of labor force does not include subsistence in the U.S. definition, while the ILO definition does include subsistence workers: the second difference is that the age limit in the U.S. is usually for persons aged 16 and over, while ILO uses ages 15 and over. The two methods result in different labor force participation rates and unemployment rates. We hope that the tables provided will allow the computation of the U.S. method.

Comparability between the statistics on industry and occupation from the 1994 and 2000 Censuses and statistics from other sources is affected by many of the factors described in the section on *Employment Status*. These factors are primarily geographic differences between residence and place of work, different dates of reference, and differences in counts because of dual job holding. Industry data from population censuses cover all industries and all kinds of workers, whereas, data from establishments often excluded private household workers, government workers, and the self-employed. Also, the replies from household respondents may have differed in detail and nature from those obtained from establishments.

Occupation data from the census and data from government licensing agencies, professional associations, trade unions, etc., may not be as comparable as expected. Organizational listings often include persons not in the labor force or persons devoting all or most of their time to another occupation; or the same person may be included in two or more different listings. In addition, relatively few organizations, except for those requiring licensing, attained complete coverage of membership in a particular occupational field.

LANGUAGE SPOKEN AT HOME AND FREQUENCY OF LANGUAGE USAGE

The data on language spoken were derived from answers to questionnaire items 15a and 15b. They are intended to measure the extent to which languages are currently being spoken and how frequently they are spoken relative to English. The questions were tabulated only of persons 5 years old and over.

Frequency of Language Usage - Persons who reported that they spoke any language(s) were asked to report languages in item 15a, in order of usage. Respondents were given the option of listing up to three languages.

Language Spoken at Home - Persons who reported languages in item 15a were asked in questionnaire item 15b what language they usually used at home. They were not to include languages spoken only at school or languages for which the ability was limited to a few words or slang.

If more than one language was spoken, the person was asked for up to three. The language spoken most often at home was also collected. The responses were written on the form by the enumerator and later given a two-digit code in a separate operation. Answers were coded using a detailed list of languages which distinguished more than 40 languages or language groups.

The *imputation* procedure for persons who failed to report language spoken involved attributing the language of other household members to a person with no entry. If that was not possible, the language of a person of like ethnic origin and other demographic characteristics was imputed. Unreported frequency of use was allocated in a similar manner.

Comparability - These questions were asked for the first time in the 1980 Census. The language categories shown in the 1994 and 2000 reports are slightly different from 1980.

LITERACY

Data on literacy, or ability to read and write, were derived from responses to questionnaire item 14, which was asked of all persons. In reports, the data are generally shown only for persons 10 years old and over since persons less than 10 years old have not yet completed the 5th grade and are more likely to be considered not literate only because of the limited exposure to

schooling. Respondents were asked if they could read and write in any language. They could report being literate in English or any other language. The enumerators were instructed that a literate person would have the ability to read a letter from someone else and also write a letter. A person was not literate if he/she could read but not write, or if the writing ability was limited to writing the person's own name.

Comparability - This question was asked in the 1980, 1994 and 2000 Censuses.

MARITAL STATUS

The data on marital status were derived from answers to questionnaire item 5, which was asked of all persons. The marital status classification refers to the status at the time of enumeration. Data on marital status are tabulated only for persons 15 years old and over.

All persons were asked whether they were *now married, widowed, divorced, separated, or never married*. Couples who live together (unmarried persons, persons in common-law marriages) were allowed to report the marital status they considered the most appropriate.

Never Married - Includes all persons who have never been married, including persons whose only marriage(s) was annulled.

Ever Married -- Includes persons married at the time of enumeration (including those separated), widowed, or divorced.

Now Married, Except Separated - Includes persons whose current marriage has not ended through widowhood, divorce, or separation (regardless of previous marital history). The category may also include couples who live together or persons in common-law marriages, if they consider this category the most appropriate. In certain tabulations, currently married persons are further classified as *spouse present* or *spouse absent*.

Separated - Includes persons legally separated or otherwise absent from their spouse because of marital discord. Included are persons who have been deserted or who have parted because they no longer want to live together but who have not obtained a divorce.

Widowed - Includes widows and widowers who have not remarried.

Divorced -- Includes persons who are legally divorced and who have not remarried.

In selected tabulations, data for married and separated persons are reorganized and combined with information on the presence of the spouse in the same household.

Now Married - All persons whose current marriage has not ended by widowhood or divorce. This category includes persons defined above as *separated*.

Spouse Present - Married persons whose wife or husband was enumerated as a member of the same household, including those whose spouse may have been temporarily absent for such reasons as travel or hospitalization.

Spouse Absent -- Married persons whose wife or husband was not enumerated as a member of the same household. This category also includes all married persons living in group quarters.

Separated - Defined above.

Spouse Absent, Other - Married persons whose wife or husband was not enumerated as a member of the same household, excluding separated. Included is any person whose spouse was employed and living away from home or in an institution or absent in the Armed Forces.

Differences between the number of currently married males and the number of currently married females occur because of reporting differences and because some husbands and wives have their usual residence in different areas. When marital status was not reported, it was imputed according to the relationship to the householder and sex and age of the person. (For more information on marital status imputation, see Chapter 3 of the National Census Report).

Comparability - The 1994 and 2000 marital status definitions are the same as those used in 1980 with the exception of the term *never married*, which replaced the term *single* in tabulations. Also, the category *consensually married* has been dropped.

MILITARY DEPENDENCY

The data on military dependency were derived from the answers to questionnaire item 10. The question was asked of all persons. Other items determined whether anyone in the housing unit was a current or past member of the Armed Forces. This item was used to determine whether other persons in the housing unit were a dependent of (1) an active-duty member of the Armed Forces or (2) a retired member of the Armed Forces, or dependent of an active-duty or retired member of the full-time National Guard or Armed Forces Reserve. All other persons were to report in category (3) as “No”.

Comparability - Since this item was asked for the first time in the 1994 census, so the 2000 data allow for trends.

PLACE OF BIRTH

The data on place of birth were derived from answers to question 8. Each place of birth question asked for the name of the island/village, municipality, the FSM State, or the foreign country where the person was born according to current international boundaries. Since numerous changes in boundaries of foreign countries have occurred in the last century, some persons may have reported their place of birth or their parents' place of birth in terms of boundaries that existed at the time of the birth or emigration, or in accordance with their own national preference.

Persons not reporting place of birth were assigned the birthplace of another family member or were allocated the response of another person or parent with similar characteristics. The places of birth shown in the report were selected based on the number of respondents who chose to report that area or country of birth.

Comparability - Similar data were shown in tabulations for the 1980, 1994 and 2000 Censuses. However, non-response was allocated.

REFERENCE WEEK

The data on labor force status and commuting characteristics were related to the reference week; that is, the calendar week preceding the date on which the respondents were interviewed by enumerators. This week is not the same for all respondents since the enumeration was not completed in one week. The occurrence of holidays during the enumeration period could affect the data on actual hours worked during the reference week, but probably had no effect on overall measurement of employment status (see the discussion below on *Comparability*).

Comparability - The reference week for the 1994 was in September while the reference week for the 1980 and 2000 censuses was in April. The difference in the reference weeks however does not affect the overall measurement of employment status since this information was based on work activity during the entire reference week.

RESIDENCE IN 1995

The data on residence in 1995 were derived from answers to question 16b, which asked for the municipality, FSM State, or foreign country of residence on April 1, 1995, for those persons reporting in question 16a that they lived in a different municipality than their current residence on that date.

When no information on residence in 1995 was reported for a person, information for other family members, if available, was used to assign a location of residence in 1995. All cases of non-response, or incomplete response not assigned based on information from other family members, were allocated based on the previous residence of other persons with similar characteristics who provided complete information.

Selected countries were shown for persons who lived outside the area in which they were enumerated in 1995; persons living in countries not shown separately are included in the *Elsewhere* category.

The number of persons who were living in a different municipality in 1995 is somewhat less than the total number of moves during the 5-year period. Some persons in the same municipality at the two dates had moved during the 5-year period; but by the time of the census, they had returned to their 1995 residence. Other persons who were living in a different municipality had

made one or more intermediate moves. For similar reasons, the number of persons living in a different state, or other country may be understated.

Comparability – These questions were also asked in the 1994 Census, with responses allocated. Similar questions were asked in 1980 but previous residence was not allocated for non-response. These persons were shown in the category *Residence in 1975 not reported*. In the 1973 Census, the migration questions did not ask for residence in a specific village or island within the area.

SCHOOL ENROLLMENT AND LABOR FORCE STATUS

Tabulation of data on enrollment, educational attainment, and labor force status for specific ages allows for calculation of the proportion of the age group who are not enrolled in school and not high school graduates or *dropouts* and an unemployment rate for the *dropout* population. Definitions of the three topics and descriptions of the census items from which they were derived are presented in *Educational Attainment*, *Employment Status*, and *School Enrollment and Type of School*. The published tabulations include both the civilian and Armed Forces populations, but labor force status is provided for the civilian population only. Therefore, the component labor force statuses may not add to the total lines high school graduate and not high school graduate. The difference is Armed Forces.

Comparability - The tabulation of school enrollment by labor force status is similar to that published in 1980 and 1994 Census reports. The 1980 Census tabulation included a single data line for Armed Forces; however, enrollment, attainment, and labor force status data were shown for the civilian population only.

SCHOOL ENROLLMENT AND TYPE OF SCHOOL

Data on school enrollment were derived from answers to questionnaire item 12. Persons were classified as enrolled in school if they reported attending a *regular* public or private school or college at any time between February 1, 2000, and the time of enumeration. The question included instructions to *include only pre-kindergarten, kindergarten, elementary school, and schooling which would leads to a high school diploma or a college degree* as regular school. Enumerators were instructed that enrollment in a trade or business school, company training, or tutoring were not to be included unless the course would be accepted for credit at a regular elementary school, high school, or college. Persons who did not answer the enrollment question were assigned the enrollment status and type of school of a person with the same age, ethnic origin or race, and at older ages, sex, whose residence was in the same or a nearby area.

Public and Private School -- Includes persons who attended school in the reference period and indicated they were enrolled by marking one of the questionnaire categories for either *public school*, *public college* or *private school*. The enumerator instructions defined a *public* school as *any school or college controlled and supported by a local or Federal Government*. *Schools supported and controlled primarily by religious organizations or other private groups* are defined as *private*.

Level of School in Which Enrolled -- Persons who were enrolled in school were classified as enrolled in *preprimary school*, *elementary school*, *high school*, or *college* according to their response to question 13 (years of school completed or highest degree received). Persons who were enrolled and reported completing pre-kindergarten school or less were classified as enrolled in *preprimary school*, which includes kindergarten. Similarly, enrolled persons who had completed at least kindergarten, but not 8th grade, were classified as enrolled in elementary or high school. Persons who completed at least the 8th grade, but who were not high school graduates, were classified as enrolled in high school. Enrolled persons who reported completing high school or some college or having received a post-secondary degree were classified as enrolled in *college*.

Enrolled persons who reported completing the twelfth grade but receiving *NO DIPLOMA* were classified as enrolled in high school. (For more information on level of school, see the discussion under *Educational Attainment*.)

Comparability - Grade and type of school attended were included in all censuses conducted in FSM since 1973, except for the mid 80's censuses of Kosrae, Pohnpei and Yap. Type of school (private or public) was not asked in 1973. Also reference period for school enrollment varied. In all censuses, college students were enumerated where they lived while attending college, whereas in earlier censuses, they generally were enumerated at their parental homes. Data on school enrollment were also collected and published by other national and local government agencies. Where these data were obtained from administrative records of school systems and institutions of higher learning, they were only roughly comparable with data from population censuses and household surveys because of differences in definitions and concepts, subject matter covered, time references, and enumeration methods. At the local level, the difference between the location of the institution and the residence of the student may affect the comparability of census and administrative data. Differences between the boundaries of school districts and census geographic units also may affect these comparisons.

SEX

The data on sex were derived from answers to questionnaire item 3, which was asked of all persons. For most cases in which sex was not reported, it was determined by the appropriate entry from the person's given name and household relationship. Otherwise, sex was imputed according to the relationship to the householder and the age and marital status of the person. For more information on sex imputation, see the National Census Report.

Sex Ratio - A measure derived by dividing the total number of males by the total number of females and multiplying by 100.

Comparability - A question on the sex of individuals has been asked of the total population in every census.

VETERAN STATUS

Data on veteran status were derived from questionnaire item 19.

Veteran Status -- The data on veteran status were derived from responses to questions 19. The term *active duty* refers to active service in the Armed Forces of the United States in the Army, Navy, Air Force, Marine Corps, or Coast Guard and to service as a Merchant Marine Seaman during World War II; it does not include active duty in the military Reserves or National Guard for the 4-6 months of initial training or yearly summer camps. For census data products, a *civilian veteran* is a person 16 years old or over who has served (even for a short time) but is not now serving on active duty in the U.S. Army, Navy, Air Force, Marine Corps, or the Coast Guard, or who served as a Merchant Marine seaman during World War II. Persons who served in the National Guard or military Reserves are classified as veterans only if they were ever called up for active duty not counting the 4-6 months duty for initial training or yearly summer camps. All other civilians 16 years old and over are classified as non-veterans. The military Reserves consists of the reserve branches of the U.S. Army, Navy, Air Force, Marine Corps, and Coast Guard.

VOCATIONAL TRAINING

The data on vocational training were derived from responses to questionnaire item 18. Vocational training is a school program designed to prepare a person for work in a specific occupational field. Persons were counted as having completed vocational training if they completed the requirements for a vocational training program at a trade school, business school, hospital, some other kind of school for occupational training, or place of work.

Enumerator instructions differentiated vocational training from academic training and on-the-job training. The vocational training could be in such vocational fields as carpentry, electronics, nursing, or accounting if a bachelor's degree would not be granted for the training. Training at place of work included programs designed to teach new skills. Instruction could be provided by a company teacher or other vocational teacher, at the company or at another location. On-the-job training was not to be included as vocational training since its purpose is to provide instruction for specific job duties. Vocational training in high school was included if it was in an organized program of study and was intended to provide a marketable skill upon graduation. Individual courses for personal enrichment, such as a single typing course, were not vocational training. Job Corp training and correspondence courses were included. Also, among training not included were college courses applicable towards a bachelor's degree, single courses not part of an organized program, on-the-job training, and Armed Forces basic training. Persons who completed a program were asked to report whether the training was in the area in the FSM or outside the FSM. This portion of the question was new in 1994, and reported in 2000.

Comparability - The vocational training question was first asked in the census in 1980. Although the basic question has remained nearly the same, different additional questions were included in each census. In 1980, an additional question asked about the specific type of school. In 2000 the respondent was asked where geographically the course was taken (in the FSM, outside the FSM).

WORK STATUS IN 1999

The data on work status in 1999 were derived from answers to questionnaire item 31a.

Work Status in 1999 - Persons 15 years old and over who worked 1 or more weeks according to the criteria described below are classified as *Worked in 1999*; all other persons 15 years old and over are classified as *Did not work in 1999*.

Weeks Worked in 1999 -- The data on weeks worked in 1999 were derived from answers to questionnaire item 31b. Question 31b (Weeks worked in 1999) was asked of persons who indicated in Question 31a that they worked in 1999.

The data pertain to the number of weeks during 1999 in which a person did any work for pay or profit (including paid vacation and paid sick leave, but excluding subsistence activity) or worked without pay on a family farm or in a family business. Weeks of active service in the Armed Forces also are included.

Number of Workers in Family in 1999 - The term *Worker* as used for these data is defined according to the criteria described in the section on *Work Status in 1999*.

Limitation of the Data - It is probable that the number of persons who worked in 1999 and the number of weeks worked are understated since there is some tendency for respondents to forget intermittent or short periods of employment or to exclude weeks worked without pay. There may also be a tendency for persons not to include weeks of paid vacation among their weeks worked; one result may be that the census figures may understate the number of persons who worked *50-52 weeks*.

Comparability - The data on weeks worked collected in the 1994 and 2000 Censuses are comparable with data from the 1980.

In 1980, 1994 and 2000, persons were asked to provide the specific number of weeks they worked.

CONTINUOUS RESIDENCE YEAR OF ENTRY

The data on continuous residence and year of entry were derived from answers to questionnaire item 11a and 11b, which was asked of all persons. The question in 11a, *Since when has...lived continuously in this municipality?* was asked of persons who indicated in the citizenship question that they were not citizen or legal resident of the state or municipality they are currently residing. (For more information, see the discussion under *Citizenship*).

The 1994 and 2000 Census questions, tabulations, and census data products about citizenship and year of entry include no reference to immigration. All persons who were born and resided outside the FSM before becoming residents of the FSM have a date of entry. Some of these persons are U.S. citizens by birth (for example, persons born in the U.S., Puerto Rico; CNMI; U.S. Territory, or born abroad of American parents). To avoid any possible confusion concerning the date of entry of persons who are U.S. citizens by birth, the term, *year of entry* is used in this report instead of the term *year of immigration*.

Limitation of the Data - The census questions on citizenship and year of entry were not designed to measure the degree of permanence of residence in the area. The phrase, *to stay* was used to obtain the year in which the person became a resident of the area. Although the respondent was directed to indicate the year he or she entered the area *to stay*, it was difficult to ensure that respondents interpreted the phrase correctly.

Comparability - In 1980, the question on year of entry included nine arrival times and was asked only of the foreign-born population. In 1994 and 2000, persons reported the actual year of entry.

HOUSING CHARACTERISTICS

LIVING QUARTERS

Living quarters are classified as either housing units or group quarters. (For more information, see discussion of *Group Quarters* under Population Characteristics.) Usually, living quarters are in structures intended for residential use (for example, a one-family home, apartment house, hotel or motel, boarding house, or mobile home). Living quarters also may be in structures intended for nonresidential use (for example, the rooms in a warehouse where a guard lives), as well as in places such as boats, tents, vans, shelters for the homeless, dormitories, and barracks.

Housing Units - A housing unit is a house, an apartment, a mobile home or trailer, a group of rooms or a single room occupied as separate living quarters or, if vacant, intended for occupancy as separate living quarters. Separate living quarters are those in which the occupants live and eat separately from any other persons in the building and which have direct access from outside the building or through a common hall.

The occupants may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated persons who share living arrangements. For vacant units, the criteria of separateness and direct access are applied to the intended occupants whenever possible. If that information cannot be obtained, the criteria are applied to the previous occupants.

Both occupied and vacant housing units are included in the housing unit inventory, except that recreational vehicles, boats, vans, tents, and the like are included only if they are occupied as someone's usual place of residence. Vacant mobile homes are included provided they are intended for occupancy on the site where they stand. Vacant mobile homes on dealers' sales lots or in storage yards are excluded from the housing inventory.

If the living quarters contain 9 or more persons unrelated to the householder or person in charge (a total of 10 unrelated persons), they are classified as group quarters. If the living quarters contain eight or fewer persons unrelated to the householder or person in charge, it is classified as a housing unit.

Occupied Housing Units - A housing unit is classified as occupied if it is the usual place of residence of the person or group of persons living in it at the time of enumeration, or if the occupants are only temporarily absent; that is, away on vacation or business. If all the persons staying in the unit at the time of the census have their usual place of residence elsewhere, the unit is classified as vacant. A household includes all the persons who occupy a housing unit as their usual place of residence. By definition, the count of occupied housing units is less than the count of households or householders, since some housing units may have more than one household.

Vacant Housing Units - A housing unit is vacant if no one is living in it at the time of enumeration, unless its occupants are only temporarily absent. Units temporarily occupied at the time of enumeration entirely by persons who have a usual residence elsewhere are also classified as vacant.

New units not yet occupied are classified as vacant housing units if construction has reached a point where all exterior windows and doors are installed and final usable floors are in place. Vacant units are excluded if they are open to the elements; that is, the roof, walls, windows, and/or doors no longer protect the interior from the elements, or if there is positive evidence (such as a sign on the house or in the block) that the unit is condemned or is to be demolished. Also excluded are quarters being used entirely for nonresidential purposes, such as a store or an office, or quarters used for the storage of business supplies or inventory, machinery, or agricultural products.

Hotels, Motels, Rooming Houses, Etc. - Occupied rooms or suites of rooms in hotels, motels, and similar places are classified as housing units only when occupied by permanent residents; that is, persons who consider the hotel as their usual place of residence or have no usual place of residence elsewhere. Vacant rooms or suites of rooms are classified as housing units only in those hotels, motels, and similar places in which 75 percent or more of the accommodations are occupied by permanent residents.

If any of the occupants in a rooming or boarding house live and eat separately from others in the building and have direct access, their quarters are classified as separate housing units.

Staff Living Quarters - The living quarters occupied by staff personnel within any group quarters are separate housing units if they satisfy the housing unit criteria of separateness and direct access; otherwise, they are considered group quarters.

Comparability - There was no change in the housing unit definition between 1980 and 2000.

AIR CONDITIONING

The data on air conditioning were obtained from questionnaire item H14, which was asked at both occupied and vacant housing units. Air conditioning is defined as the cooling of air by a refrigeration unit. It does not include evaporative coolers, fans, or blowers, which are not connected to a refrigeration unit; however, it does include heat pumps. A central system is an installation which air conditions a number of rooms. In an apartment building, each apartment may have its own central system, or there may be several systems, each providing central air conditioning for a group of apartments. A central system with individual room controls is a *central air-conditioning system*. A *room unit* is an individual air conditioner which is

installed in a window or an outside wall and is generally intended to cool one room, although it may sometimes be used to cool more than one room.

Comparability - Data on air conditioning were collected for the first time in 1980 and were shown only for year-round housing units. In 1994 and 2000, data are shown for all housing units.

BATHTUB OR SHOWER

The data on bathtub or shower were obtained from questionnaire item H9c, which was asked at both occupied and vacant housing units. Bathtub or shower was counted only if the equipment was permanently connected to piped running water. Portable bathtubs were not included in the bathtub or shower category.

Comparability - The data on bathtub or shower were also collected 1980 for the FSM. In 1980, the data were shown separately as well as combined with data on water supply and flush toilet to identify the presence of complete plumbing facilities.

BATTERY OPERATED RADIO

The data on battery operated radios were obtained from questionnaire item H12, which was asked at occupied housing units. Included are battery operated radios, car radios, transistors, and other battery operated sets in working order or needing only a new battery for operation.

Comparability - Data on radios were collected for the first time in 1980. However, in 1980, data on radios included all types of radio sets, either electric or battery operated. In 1994 and 2000, only battery operated radios were considered.

BEDROOMS

The data on bedrooms were obtained from questionnaire item H8, which was asked at both occupied and vacant housing units. The number of bedrooms is the count of rooms designed to be used as bedrooms; that is, the number of rooms that would be listed as bedrooms if the house or apartment were on the market for sale or for rent. Included are all rooms intended to be used as bedrooms even if they currently are being used for some other purpose. A housing unit consisting of only one room, such as a one-room efficiency apartment is classified, by definition, as having no bedroom.

Comparability - In 1980, data for bedrooms were shown only for year-round housing units. In 1994 and 2000, data are shown for all housing units. In 1980, a room was defined as a bedroom if it was used mainly for sleeping even if also used for other purposes. Rooms that were designed to be used as bedrooms but used mainly for other purposes were not considered to be bedrooms. The 1994 and 2000 definition count rooms designed to be used as bedrooms. A distribution of housing units by number of bedrooms calculated from data collected in a 1986 stateside test showed virtually no differences in the data obtained from the two versions of the definition except in the two bedroom category, where the previous *use* definition showed a slightly lower proportion of units.

MONTHLY RENT

The data on monthly rent were obtained from questionnaire item H22, which was asked at all occupied housing units that were rented for cash rent at the time of enumeration.

Housing units that are renter occupied without payment of cash rent are shown separately as *No cash rent* in census data products. The unit may be owned by friends or relatives who live elsewhere and who allow occupancy without charge. Rent-free houses or apartments may be provided to compensate caretakers, members of the clergy, tenant farmers, sharecroppers, or others.

Rent is the monthly rent agreed to or contracted for, regardless of any furnishings, utilities, fees, meals, or services that may be included. For vacant units, it is the monthly rent asked for the rental unit at the time of enumeration. If the monthly rent includes rent for a business unit or for living quarters occupied by another household, the respondent was instructed to report that part of the rent estimated to be for his or her unit only. Respondents were asked to report rent only for the housing unit enumerated and to exclude any rent paid for additional units or for business premises.

If a renter pays rent to the owner of a condominium or cooperative, and the condominium fee or cooperative carrying charge is also paid by the renter to the owner, the respondent was instructed to include the fee or carrying charge.

If a renter receives payments from lodgers or roomers who are listed as members of the household, the respondent was instructed to report the rent without deduction for any payments received from the lodgers or roomers. The respondent was instructed to report the rent agreed to or contracted for even if paid by someone else such as friends or relatives living elsewhere, or a church or agency.

Limitation of the Data - In 1980, monthly contract rent for vacant units had high allocation rates.

Comparability - In FSM, data on monthly rent were collected since 1980. Rent in 1980 was asked for vacant units as well.

COOKING FACILITIES

The data on cooking facilities were obtained from questionnaire items H17a and H17b, which were asked at both occupied and vacant housing units. Main cooking facilities are the ones that are used most often for preparation of meals. They can be located either inside or outside the building. Cooking facilities are classified as (1) Electric range; (2) Kerosene stove; (3) Gas stove; (4) Microwave oven; (5) Portable electric stove; or (6) Wood stove; (7) Open fire; (8) Other. The category *Other* includes a hotplate, fireplace, or any other type of cooking facility not listed separately. *No cooking facilities* includes those units with no cooking facilities available either inside or outside the building.

Comparability - Data on cooking facilities were collected in FSM since 1973. In 1980, the data for cooking facilities were shown for year-round and occupied housing units. In 1994 and 2000, data are shown for all housing units. Also, *Microwave oven* was added to the cooking facilities categories.

DURATION OF VACANCY

The data for duration of vacancy (also referred to as *months vacant*) were obtained from questionnaire item C3, which was completed by census enumerators. The statistics on duration of vacancy refer to the length of time (in months and years) between the date the last occupants moved from the unit and the time of enumeration. The data, therefore, do not provide a direct measure of the total length of time units remain vacant.

For newly constructed units which have never been occupied, the duration of vacancy is counted from the date construction was completed. For recently converted or merged units, the time is reported from the date conversion or merger was completed. Units occupied by an entire household with a usual home elsewhere are assigned to the *Less than 1 month* interval.

Comparability - Data on duration of vacancy were collected for the first time in 1980 and were shown only for year-round vacant housing units. In 1994, data are shown for all vacant housing units.

ELECTRIC POWER

The data on electric power were obtained from questionnaire item H10, which was asked at both occupied and vacant housing units. Those units equipped with electric power even though the current may be shut off because the unit is vacant or because the electric bills have not been paid were considered to have electric power.

Comparability - In 1980, data for electric power were shown only for year-round housing units. In 1994 and 2000, data are shown for all housing units.

INSURANCE FOR FIRE, HAZARD, AND FLOOD

The data on fire, hazard, and flood insurance were obtained from questionnaire item H24c, which was asked at owner-occupied one-family houses, condominiums, and mobile homes. The statistics for this item refer to the annual premium for fire, hazard, and flood insurance on the property (land and buildings); that is, policies that protect the property and its contents against loss due to damage by fire, lightning, winds, hail, flood, explosion, and so on.

Liability policies are included only if they are paid with the fire, hazard, and flood insurance premiums and the amounts for fire, hazard, and flood cannot be separated. Premiums are included even if paid by someone outside the household or remain unpaid. When premiums are paid on other than a yearly basis, the premiums are converted to a yearly basis.

Comparability - Data on payment for fire and hazard insurance were collected for the first time in 1980. Flood insurance was not specifically mentioned in the wording of the question in 1980. The question was asked only at owner-occupied one-family

houses. Excluded were mobile homes, condominiums, houses with a business or medical office on the property, and housing units in multi-unit buildings. In 1994 and 2000, the question was asked of all one-family owner-occupied houses, including mobile homes, condominiums, and one-family houses with a business or medical office on the property.

KITCHEN FACILITIES

Data on kitchen facilities were obtained from questionnaire items H17a, H17b, H17c, H17d and H17e which were asked at both occupied and vacant housing units. A unit has complete kitchen facilities when cooking facilities (electric, kerosene, or gas stove, microwave oven and non-portable burners, or cookstove), refrigerator, and a sink with piped water are located in the same building as the living quarters being enumerated. They need not be in the same room. Lacking complete kitchen facilities includes those conditions when all three specified kitchen facilities are present, but the equipment is located in a different building; some, but not all of the facilities are present; or none of the three specified kitchen facilities are present in the same building as the living quarters being enumerated.

Comparability – In 1980, data for complete kitchen facilities were shown only for year-round housing units. In 1994 and 2000, data are shown for all housing units.

MORTGAGE PAYMENT

The data on mortgage payment were obtained from questionnaire item H24b, which was asked at owner-occupied one-family houses, condominiums, and mobile homes. Question H24b provides the regular monthly amount required to be paid the lender for the first mortgage (deed of trust, contract to purchase, or similar debt) on the property. Amounts are included even if the payments are delinquent or paid by someone else.

The amounts reported include everything paid to the lender including principal and interest payments, real estate taxes, fire, hazard, and flood insurance payments, and mortgage insurance premiums.

Comparability - The data on mortgage payment were obtained only from owner-occupied one-family houses. Excluded were mobile homes, condominiums, houses with a business or medical office on the property, and housing units in multi-unit buildings. In 1994 and 2000, the questions on monthly mortgage payments were asked of all owner-occupied one-family houses, mobile homes, condominiums, and one-family houses with a business or medical office.

The 1980 Census obtained total regular monthly mortgage payments, including payments on second or junior mortgages, from a single question. The 1994 and 2000 Censuses obtained regular monthly payment, including payment on the first mortgage.

MORTGAGE STATUS

The data on mortgage status were obtained from questionnaire items H24a, which were asked at owner-occupied one-family houses, condominiums, and mobile homes. *Mortgage* refers to all forms of debt where the housing unit is pledged as security for repayment of the debt. It includes such debt instruments as deeds of trust, trust deeds, contracts to purchase, or similar debts.

Comparability - Information on mortgage status was collected for FSM in 1980. It was collected only at owner-occupied one-family houses. Excluded were mobile homes, condominiums, houses with a business or medical office, and housing units in multi-unit buildings. In 1994 and 2000, the questions on monthly mortgage status were asked of all owner-occupied one-family houses, mobile homes, condominiums, and one-family houses with a business or medical office.

PLUMBING FACILITIES

The data on plumbing facilities were obtained from questionnaire items H9a to H9d, which were asked at both occupied and vacant housing units. A unit has complete plumbing facilities when piped water (either hot or cold), a flush toilet, and a bathtub or shower are located in the unit being enumerated. Lacking complete plumbing facilities includes those conditions when all three facilities are present but the equipment is located outside the unit, or when some but not all of the facilities is present, or none of the facilities is present. A unit has complete plumbing facilities when the same three facilities are present but they may be either in the unit being enumerated or inside the building in which they unit is located.

Comparability – In 1980, the data were shown only for year-round housing units. Also in 1980, plumbing was considered to be complete if all three facilities were located in the same building as the unit being enumerated, for all areas. In 1994, these facilities must be located in or outside of the unit being enumerated.

REFRIGERATOR

The data on refrigerators were obtained from questionnaire item H17c, which was asked at both occupied and vacant housing units. The refrigerator may be located in the housing unit or in a kitchen elsewhere in the building where the house is located. The category *No refrigerator* consists of units utilizing any type of cooling system other than an electric or gas refrigerator, or units that do not have a refrigerator.

Comparability - In 1980, the data on refrigerator were shown only for occupied housing units. In 1994 and 2000, data were shown for all housing units. Also, the question asks if there is an electric, gas, or kerosene refrigerator unit.

ROOMS

The data on rooms were obtained from questionnaire item H7, which was asked at both occupied and vacant housing units. The statistics on rooms are in terms of the number of housing units with a specified number of rooms. The intent of this question is to count the number of whole rooms used for living purposes.

For each unit, rooms include living rooms, dining rooms, kitchens, bedrooms, finished recreation rooms, enclosed porches suitable for year round use, and lodger's rooms. Excluded are kitchenettes, strip or pullman kitchens, bathrooms, open porches, balconies, halls or foyers, utility rooms, unfinished attics or basements, or other unfinished space used for storage. A partially divided room is a separate room only if there is a partition from floor to ceiling, but not if the partition consists solely of shelves or cabinets.

Median Rooms - This measure divides the room distribution into two equal parts, one-half of the cases falling below the median number of rooms and one-half above the median. In computing median rooms, the whole number is used as the midpoint of the interval; thus, the category *3 rooms* is treated as an interval ranging from 2.5 to 3.5 rooms. Median rooms is rounded to the nearest tenth. (For more information on medians, see the discussion under *Derived Measures*.)

Comparability - In 1980, data for rooms were shown only for year-round housing units. In 1994 and 2000, data are shown for all housing units.

SEWAGE DISPOSAL

The data on sewage disposal were obtained from questionnaire item H16, which was asked at both occupied and vacant housing units. Housing units are either connected to a public sewer, to a septic tank or cesspool, or they dispose of sewage by other means. A public sewer may be operated by a government body or by a private organization. A housing unit is considered to be connected to a septic tank or cesspool when the unit is provided with an underground pit or tank for sewage disposal. The category *No, Use other means* includes housing units which dispose of sewage in some other way.

Comparability - Data on sewage disposal were collected for the first time in 1980 and were shown only for year-round housing units. In 1994 and 2000, data are shown for all housing units.

SINK WITH PIPED WATER

The data on sink with piped water were obtained from questionnaire item H17e, which was asked at both occupied and vacant housing units. A sink with piped water must be inside the building where the housing unit being enumerated is located for the unit to be classified as having a sink with piped water.

Comparability - Data on sink with piped water were collected for the first time for FSM in 1994, and repeated in 2000.

SOURCE OF WATER

The data on source of water were obtained from questionnaire item H15, which was asked at both occupied and vacant housing units. Housing units may receive their water supply from a number of sources. The source may be in the building, in some other place on the property, or elsewhere. In FSM the common sources are classified as (1) *A public (government) system only*. The water may be supplied by a municipal water system, water district, water company, etc., or it may be obtained from a well which supplies water to five or more housing units. (2) *A community system only* category includes water supplied by a community water system, which is maintained by the community. A source of water may be (3) *A public (government) system and catchment* if there is running water which comes from a public (government) system and a catchment is also used. Water is categorized as obtained from (4) *A community system and catchment* if the water is supplied from both community system and a catchment. If the water is supplied from a well on the property or a neighboring property serving 4 or fewer housing units, the units are classified as having water supplied by (5) *An individual well*. Well water that is hand drawn, wind drawn, or engine drawn; piped or not piped; stored in tanks or used directly from the well is included. A source of water may be (6) *A catchment, tanks, or drums only' if the only source of water is a catchment, tanks, or drums, in which rainwater is collected*. (7) *A public standpipe or street hydrant* is an elevated tank or a vertical storage cylinder or a street hydrant which is connected to a public system from which nearby residents draw water. (8) *Purchased bottle' are water purchased from stores or private water distributing companies, which usually comes in a bottle or other containers*. The category (9) *Some other source...* includes water obtained privately from springs, rivers, irrigation canals, creeks or other sources that are not listed.

Comparability - In 1980, data were shown for source of water only for year-round housing units. In 1994 and 2000, data were shown for all housing units.

TELEPHONE OR CB RADIO IN HOUSING UNIT

The data on telephones or CB radio were obtained from questionnaire item H11, which was asked at occupied housing units. A telephone or CB radio must be inside the house or apartment for the unit to be classified as having a telephone or CB radio. Units where the respondent uses a telephone or CB radio located inside the building but not in the respondent's living quarters are classified as having no telephone or CB radio.

Comparability - Data on telephones were collected for the first time in 1980. There was no change in the telephone in housing unit definition between 1980 and 2000. *CB Radio* was added to the question in 1994.

TELEVISION OR VCR

The data on television or VCR were obtained from questionnaire item H13, which was asked at occupied housing units. The statistics on television or VCR sets are in terms of the number of households having a television or VCR in the living quarters. The television or VCR should be in working order or being repaired. Included are floor, table, built-in, or portable models, or combinations with radios, record players, or combined television and VCR set. Answers to the question on television or VCR question is classified in the following categories: (1) *Both TV and VCR*; (2) *TV only*; (3) *VCR only*. If the household has neither a television set nor a VCR elsewhere in the housing unit, it is classified as having (4) *None*.

Comparability - Data on television sets were collected for the first time in 1980. There was no change in the television set definition between 1980 and 2000.

TENURE

The data for tenure were obtained from questionnaire item H21, which was asked at all occupied housing units. All occupied housing units are classified as either owner occupied or renter occupied.

Owner Occupied -- A housing unit is owner occupied if the owner or co-owner lives in the unit even if it is mortgaged or not fully paid for. The owner or co-owner must live in the unit and usually is person 1 on the questionnaire. The unit is *owned by you or someone in this household with a mortgage or loan* if it is being purchased with a mortgage or some other debt arrangement such as a deed of trust, trust deed, contract to purchase, land contract, or purchase agreement. The unit is also considered owned with a mortgage if it is built on leased land and there is a mortgage on the unit.

A housing unit is *Owned by you or someone in this household free and clear (without a mortgage)* if there is no mortgage or other similar debt on the house, apartment, or mobile home including units built on leased land if the unit is owned outright without a mortgage.

Renter Occupied -- All occupied housing units which are not owner occupied, whether they are rented for cash rent or occupied without payment of cash rent, are classified as renter occupied. A housing unit is *Rented for cash rent* if any money rent is paid or contracted for. The rent may be paid by persons who are not living in the unit, such as a relative or friend living elsewhere; or it may be paid by a private company or organization, for example, a cannery or welfare agency. *No cash rent* units are separately identified in the rent tabulations. Such units are generally provided free by friends or relatives or in exchange for services such as resident manager, caretaker, members of the clergy, or tenant farmer.

Comparability - In 1980, condominium units and cooperatives were dropped from the tenure item. For 1994 and 2000, the response categories were expanded to allow the respondent to report whether the unit was owned with a mortgage or free and clear (without a mortgage). The distinction between units owned with a mortgage and units owned free and clear has been added in 1994 to improve the count of owner-occupied units.

TOILET FACILITIES

The data on toilet facilities were obtained from questionnaire items H9d, which were asked at both occupied and vacant housing units. A flush toilet may have a water tank attached for flushing (American type) or may not have a tank attached but manually flushed with water obtained from other sources. A flush toilet is emptied into a main sewer, a septic tank, or a cesspool. If the unit did not have a flush toilet, the respondent was asked to identify their type of toilet facilities as *Outhouse, privy, or benjo* or *Other or none*.

Comparability - In 1980, the data on toilet facilities were not shown separately but were combined with data on water supply and bathtub or shower to determine the presence of complete plumbing facilities. In 1994 and 2000, the data were shown separately.

TYPE OF MATERIAL USED FOR FOUNDATION

The data on type of material used for the foundation of the building were obtained from questionnaire item H5, which was asked at both occupied and vacant housing units. Housing units were classified according to the type of material used most in the construction of the foundation of the structure. The categories for types of materials used are: (1) *Concrete*; (2) *Wood pier or piling*; (3) *Coral*; (4) *Stone*; (5) *Other*, for all types of construction materials which cannot be described by any of the other specific categories or if there is no foundation.

Comparability - Data on type of material used for foundation were collected for the first time in 1994, and repeated in 2000.

TYPE OF MATERIAL USED FOR OUTSIDE WALLS

The data on type of material used for the outside walls of the building were obtained from questionnaire item H3, which was asked at both occupied and vacant housing units. Housing units were classified according to the type of material used most in the construction of the outside walls of the structure. The categories for types of materials used are: (1) *Poured concrete*; (2) *Concrete blocks*, (the wall may be covered with plaster cement); (3) *Metal*, including zinc, steel, tin, etc.; (4) *Plywood*, including woodboards, etc.; (5) *Thatch*, including sugar cane leaves, palm or bandanus thatch, palm leaves, etc.; (6) *Local wood or bamboo* (7) *Other*, for all other types of construction materials which cannot be described by any of the specific categories; and (8) *No walls*.

Comparability - Data on type materials used for outside walls have been collected since 1980 for FSM and were shown only for year-round housing units. In 1994 and 2000, data are shown for all housing units.

TYPE OF MATERIAL USED FOR ROOF

The data on type of material used for the roof of the building were obtained from questionnaire item H4, which was asked at both occupied and vacant housing units. Housing units were classified according to the type of material used most in the construction of the roof of the structure. The categories for types of materials used are: (1) *Poured concrete*; (2) *Metal*, including zinc, steel, tin, etc.; (3) *Wood*, including woodboards, plywood, etc.; (4) *Thatch*, including sugar cane leaves, palm or

pandanus thatch, palm leaves, straw, etc.; (5) *Bamboo*, or (6) *Other*, for all other types of construction materials which cannot be described by any of the specific categories.

Comparability - Data on type of material used for roofs were collected for the first time in 1980 and were shown only for year-round housing units. In 1994 and 2000, data are shown for all housing units.

UNITS IN STRUCTURE

The data on units in structure (also referred to as *type of structure*) were obtained from questionnaire item H1, which was asked at all housing units. In FSM, a structure is a separate building that either has open spaces on all four sides or is separated from other structures by dividing walls that extend from ground to roof. In determining the number of units in a structure, all housing units, both occupied and vacant, are counted. Stores or office space are excluded.

One-Family House, Detached - This is a 1-unit structure detached from any other structure; that is, with open space on all four sides. Such structures are considered detached even if they have an adjoining shed or garage. A one-family house which contains a business is considered detached as long as the building has open space on all four sides. Mobile homes or trailers to which one or more permanent rooms have been added or built are also included.

One-Family House, Attached -- This is a 1-unit structure which has one or more walls extending from ground to roof separating it from adjoining structures. In row houses (sometimes called townhouses), double houses, or houses attached to nonresidential structures, each house is a separate, attached structure if the dividing or common wall goes from ground to roof.

A Building with 2 or more apartments - These are units in structures containing 2 or more housing units, further categorized as units in structures with 2, 3 or 4, 5 to 9, 10 to 19, 20 to 49, and 50 or more units.

Other - This category is for any living quarters occupied as a housing unit that does not fit the previous categories. Examples that fit this category are abandoned cars, campers, vans, and shacks, trailers and mobile homes.

Comparability - In 1973 and 1980, data for units in structure were shown only for year-round housing units. In 1994 and 2000, data are shown for all housing units. The category *Boat* was replaced in 1994 by the category *Other*.

USUAL HOME ELSEWHERE

The data for usual home elsewhere are obtained from questionnaire item 1d, which was completed by census employees. A housing unit temporarily occupied at the time of enumeration entirely by persons with a usual residence elsewhere is classified as vacant. The occupants are classified as having a *Usual home elsewhere* and are counted at the address of their usual place of residence. Typical examples are people in a vacation home, persons renting living quarters temporarily for work, and migrant workers.

UTILITIES

The data on utility costs were obtained from questionnaire items H20a through H20d, which were asked of occupied housing units.

Questions H20a through H20d asked for the average monthly cost of utilities, which includes electricity, kerosene, water, and other fuels (oil, gas, wood, etc.).

Costs are recorded if paid by or billed to occupants. Costs that are paid by landlords, included in the rent payment, or included in condominium or cooperative fees are excluded.

Limitation of the Data - Caution should be exercised in using these data for direct analysis because costs are not reported for certain kinds of units such as renter-occupied units with all utilities included in the rent.

Comparability - The data on utility costs were collected in FSM since 1980. In 1994 and 2000, *average monthly costs for kerosene* is asked separately from *oil, gas, wood, etc.* category.

VACANCY STATUS

The data on vacancy status were obtained from questionnaire item C1, which was completed by census enumerators. Vacancy status and other characteristics of vacant units were determined by enumerators obtaining information from landlords, owners, neighbors, and others. Vacant units are subdivided according to their housing market classification as follows:

For Rent -- These are vacant units offered *for rent* and vacant units offered either *for rent* or *for sale*.

For Sale Only - These are vacant units being offered *for sale only*, including units in cooperatives and condominium projects if the individual units are offered *for sale only*.

Rented or Sold, Not Occupied - If any money rent has been paid or agreed upon but the new renter has not moved in as of the date of enumeration, or if the unit has recently been sold but the new owner has not yet moved in, the vacant unit is classified as *rented or sold, not occupied*.

For Seasonal, Recreational, or Occasional Use - These are vacant units used or intended for use only in certain seasons or for weekend or other occasional use throughout the year. Seasonal units include those used for summer or recreation.

For Migrant Workers -These include vacant units intended for occupancy by migratory workers employed in farm work during the crop season. (Work in a cannery, a freezer plant, or a food-processing plant is not farm work.)

Other Vacant - If a vacant unit does not fall into any of the classifications specified above, it is classified as *other vacant*. For example, this category includes units held for occupancy by a caretaker or janitor, and units held for personal reasons of the owner.

Comparability - Data on vacancy status were collected for the first time for Guam in 1960, and since 1970 for all other Pacific Outlying Areas. For 1994, the category *seasonal/recreational/occasional use* combined vacant units classified in 1980 as *seasonal or migratory* and *held for occasional use*.

VALUE OF HOUSE

The data on value (also referred to as *price asked* for vacant units) were obtained from questionnaire item H23, which was asked at one-family houses, condominiums, and mobile homes that were owned, being bought, or vacant for sale at the time of enumeration. In FSM, value was the respondent's estimate of how much it would cost to build the housing unit.

Comparability - Data on value were collected for FSM 1973. In 1980, data on value of mobile homes were not collected. In 1994, the question was asked of only one-family owned or intended to be bought.

VEHICLES AND BOATS AVAILABLE

The data on vehicles and boats available were obtained from questionnaire item H18 and H19, which were asked at occupied housing units. These data show the number of households with a specified number of passenger cars, vans, pick-ups and boats kept at home and available for the use of household members. Vehicles rented or leased for one month or more, company vehicles, and police and government vehicles are included if kept at home and used for non-business purposes. Dismantled or immobile vehicles are excluded. Vehicles kept at home but used only for business purposes also are excluded.

Limitations of the Data - The statistics do not measure the number of vehicles or boats privately owned nor the number of households owning vehicles or boats.

Comparability - Data on automobiles and boats available were collected for these areas for the first time in 1980. There was no change in the vehicles available definition between 1980 and 2000.

WATER SUPPLY

The data on water supply (also referred to as *pipéd water*) were obtained from questionnaire items H9a and H9b, which were asked at both occupied and vacant housing units. Piped water means a supply of water is available at a sink, wash basin, bathtub, or shower. If both hot and cold water were available, data on the type of energy used by the water heater were obtained. The types of energy identified are electricity, gas, solar, or other fuels. Hot water need not be supplied continuously.

Hot water supplied by an electric faucet attachment at the kitchen sink, an electric shower attachment, etc., is not considered to be hot piped water.

Piped water may be located within the unit itself, or it may be in the hallway, or in a room used by several units in the building. It may even be necessary to go outdoors to reach that part of the building in which the piped water is located.

Comparability - In 1980, the data on water supply were shown only for year-round housing units and were shown separately by type of energy used to heat the water, as well as combined with data on bathtub or shower and flush toilet to determine the presence of complete plumbing facilities. In 1994 and 2000, data are shown for all housing units.

YEAR HOUSEHOLDER MOVED INTO UNIT

The data on year householder moved into unit were obtained from questionnaire item H2, which was asked at occupied housing units. These data refer to the year of the latest move by the householder. If a householder moved back into a housing unit he or she previously occupied, the year of the latest move was reported. If the householder moved from one apartment to another within the same building, the year the householder moved into the present apartment was reported. The intent is to establish the year the present occupancy by the householder began. The year that the householder moved in is not necessarily the same year other members of the household moved, although in the great majority of cases an entire household moves at the same time.

Comparability - Data on year householder moved into unit were collected for the FSM for the first time in 1980. For 1994 and 2000, the response categories have been modified to accommodate moves during the 10-year period between 1980 and 2000.

YEAR STRUCTURE BUILT

The data on year structure built were obtained from questionnaire item H6, which was asked at both occupied and vacant housing units. Data on year structure built refer to when the building was first constructed, not when it was remodeled, added to, or converted. For housing units under construction which met the housing unit definition -- that is, all exterior windows, doors, and final usable floors were in place -- the category *1999 to March 2000* was used. The figures shown in census data products relate to the number of units built during the specified periods and still in existence at the time of enumeration.

Limitation of the Data - Data on year structure built are more susceptible to errors of response and nonreporting than data on many other items since respondents must rely on their memory or on estimates of persons who have lived in the neighborhood a long time. Available evidence indicates there is underreporting in the older year built categories, especially those built in *1939 or earlier*. The introduction of the *Don't know* category (see below the discussion on *Comparability*) may result in relatively higher allocation rates.

Comparability - Data on year structure built were collected in FSM since 1973 and were shown only for year-round housing units through 1980. In 1994 and 2000, data are shown for all housing units and also the response categories have been modified to accommodate units built during the periods between 1980, 1994, 2000. In 1994 and 2000, the category *Don't know* minimized the response error mentioned in the paragraph above on limitation of the data.

DERIVED MEASURES

Census data products include various derived measures such as medians, means, and percentages, as well as certain rates and ratios. Derived measures which round to less than 0.1 are not shown but indicated as zero. In printed reports, zero is indicated by showing a dash (-).

Interpolation

Interpolation is frequently used in calculating medians based on interval data and in approximating standard errors from tables. Linear interpolation is used to estimate values of a function between two known values.

Mean

This measure represents an arithmetic average of a set of values. It is derived by dividing the sum of a group of numerical items (or aggregate) by the total number of items. Aggregates are used in computing mean values. For example, mean family income is obtained by dividing the aggregate of all income reported by persons in families by the total number of families. (Additional information on means and aggregates is included in the separate explanations of many population and housing subjects.)

Median

This value represents the middle value in a distribution. The median divides the total frequency into two equal parts: one-half of the cases fall below the median and one-half of the cases exceed the median. The median is computed on the basis of the distribution as tabulated, which is sometimes more detailed than the distribution shown in specific census publications and other data products.

In reports, if the median falls within the upper interval of the tabulation distribution, the median is shown as the initial value of the interval followed by a plus sign (+), if within the lower interval, the median is shown as the upper value of the category followed by a minus sign (-). For summary tape files, if the median falls within the upper or lower interval, it is set to a specified value. (Additional information on medians is included in the separate explanations of many population and housing subjects.)

Percentages, Rates, and Ratios

These measures are frequently presented in census products to compare two numbers or two sets of measurements. These comparisons are made in two ways: (1) subtraction, which provides an absolute measure of the difference between two items, and (2) the quotient of two numbers, which provides a relative measure of difference.

Appendix B

General Enumeration and Processing Procedures

Usual Place of Residence

The 2000 FSM Population and Housing Census was a modified *de jure* count. In accordance with *de jure* census practice, each person enumerated in the census was counted as an inhabitant of his or her *usual place of residence*, which is generally construed to mean the place where the person lives and sleeps most of the time. This place is not necessarily the same as the person's legal residence or voting place. In the vast majority of cases, however, the use of these different bases of classification would produce substantially the same statistics, although there might be appreciable differences for a few areas.

The implementation of this practice has results in the establishment of residence rules for certain categories of persons whose usual place of residence is not immediately apparent. Furthermore, this practice means that persons were not always counted as residents of the place where they happened to be staying on Census Day (April 1, 2000). Persons without a usual place of residence to report them to an enumerator, however, were counted where they happened to be staying (causing the *modified de jure* population.)

U.S. Armed Forces

Except for the Army CAT Team, there are no military installations in the Federated States of Micronesia. Inactive and retired Armed Forces residents were counted at their place of usual residence. Navy ships that happened to call at FSM ports were not enumerated during the 2000 FSM Census.

Crews of Vessels

Crew members on fishing boats, cargo, and field trip ships were enumerated on the ship as their place of usual residence. Other ships calling ports in the FSM during the time of the census were not enumerated.

Persons Away at School

Boarding students, including those below college level, were counted as residents of the area in which they were living while attending school.

Persons in Institutions

Inmates of institutions were counted as residents of the area where the institution was located. Patients in short-term wards of general hospitals were counted at their usual place of residence or no one was at their usual place of residence to report them, they were counted at the hospital.

Persons Away From Their Residence on Census Day

Persons in hotels, motels, etc., on the nights during the two-week enumeration starting April 1, 2000, having their usual place of residence within the area and who indicated that no one was at home to report them in the census, were enumerated as residents of the hotel, motel, etc. Information on persons away from their usual residence who indicated that someone was at home to report them was obtained from other members of their families, resident managers, neighbors, etc. If an entire household was away during the whole period of the enumeration, information on that household was obtained from neighbors.

Residents Abroad

Residents who were abroad for more than six months were not included in the population of the area. On the other hand, residents who were temporarily abroad on vacations, business trips, and the like, were counted at their usual residence in the area. Family members residing abroad were listed separately.

Persons from Other Areas

Persons from other areas having their usual residence in this area on census day, April 1, 2000, including those persons working within the area and those attending school (but not those living at a chancellery or consulate), were included in the enumeration as were members of their families living with them, regardless of citizenship. However, persons from other areas, temporarily visiting or traveling in the area, were not enumerated in the 2000 FSM Census.

DATA COLLECTION AND PROCESSING PROCEDURES

Data collection

The 2000 FSM Census was conducted through direct interview. Beginning Census Day, April 1, 2000, enumerators visited and listed every housing unit, asking the questions as worded on the questionnaire, and recording the answers. A questionnaire was designed with two parts; the first part for housing and the second part for persons (that is, household members).

Special questionnaires were used for the enumeration of persons in group quarters such as colleges, high school dormitories, hospitals, and prisons. These forms contained the same population questions that appeared on the regular census questionnaire but did not include any housing questions.

Data Processing

Preliminary review and edit occurred during data collection in the State Statistics Branch Offices. After more detailed review, items were coded such as places, languages, religion, industry and occupation. The data were then keyed using the CENTRY part of the Integrated Microcomputer Processing System (IMPS).

The data were then transferred electronically or by courier to the National Statistics Office in Palikir. The CONCOR edits and CENTS tabulations were developed in the National Statistics Office. "Not stated" and "invalid" cases were allocated electronically using a hot deck procedure. Five National and State staff traveled to the Census Bureau in Washington, D.C. for one month to do most of the processing for the Census.

INTRODUCTION: Hello, my name is (*Your name*) and I'm working for the 2000 Population and Housing Census. This is my identification (*Pause*). I have some questions I need to ask you. *Ask the questions on page 1. Complete a form for each household.*

COMPLETE BEFORE INTERVIEW

COMPLETE AFTER THE INTERVIEW

A. State B. Municipality
 C. Enumeration District
 D. Block:
 E. Map-Spot:
 F. Household No.:
 G. Village:
 H. Interview Started:

J. Respondent's Name: _____
 K. Respondent's Telephone: _____
 L. Population count: M F Total
 M. Type of unit: Occup Reg Vacant UHE
 N. Complete after (circle): 1st 2nd 3rd Last Resort
 O. Total number of households in this unit:
 P. Interview completed: AM / PM

The 2000 Census of Population and Housing must count every person at his or her usual residence. "Usual residence" means the place where the person lives and sleeps most of the time.

INCLUDE:

- Everyone who usually lives here such as family members, housemates and roommates, foster children, roomers, boarders, and live-in employees.
- Persons who are temporarily away on a business trip, on vacation, or in a general hospital.
- Students who live here while attending school/college
- Newborn babies born on or before April 1, 2000
- Persons who stay here most of the weeks, even if they have a home somewhere else.
- Persons with no home who were staying here on April 1, 2000.

DO NOT INCLUDE:

- Persons who usually live somewhere else
- Persons who are confined to an institution
- Students who live somewhere else while attending school
- Persons in the Armed Forces who live somewhere else.
- Persons who stay somewhere else most of the week

NOTICE: You are required by Public Law No. 5-77 to answer the 2000 Census. Your answers will be kept confidential by the same law. Only sworn Census employees may see your answers. Your information will only be used for statistical purposes.

1a. Please give me the name of each person living here (whose usual residence is this household) on April 1, including all persons staying here who have no other home. Begin with the household member in whose name the home is owned, being bought, or rented. If there is no such person, start with any adult household member (*If EVERYONE is staying here temporarily and usually lives somewhere else, get the name of each person and complete 1d.*)

Each booklet contains one up to ten persons. If more than 10 persons live in this household, you must use more than one booklet.

	Last	First	M.I.	Sex (1=M, 2=F)
1				
2				
3				
4				
5				
6				
7				
8				
9				
10				

1b. When you told me the names of the persons living here on April 1, did you leave anyone out because you were not sure if the persons should be listed – for example, someone temporarily away on a business trip or vacation, a newborn baby still in the hospital, or a person who stays here once in a while and has no other home?

1 Yes – Determine if you should include the person(s) based on the instructions for question 1a. if so, include the person and circle the person's name.

2 No

1c. When you told me the names of the persons living here on April 1, did you include anyone even though you were not sure if the persons should be listed – for example, a visitor who is staying here temporarily or a person who usually live somewhere else?

1 Yes – Determine if you should include the person(s) based on the instructions for questions 1a. if so, circle the person's name. if not, draw a line through any entry.

2 No

If EVERYONE listed is staying here only temporarily and usually lives somewhere else, mark (X) in this box and ask –

1d. Where do these people usually live?

If the usual residence is within the FSM, enter the State, Municipality, and Village.

State: _____

Municipality: _____

Village: _____

If the usual residence is not within the FSM, enter the country.

Country: _____

HOUSING QUESTIONS

H20a. What is the average monthly cost for electricity for this unit?

\$.00 OR 1. Included in rent
 2. No charge, or electricity not used

H20b. What is the average monthly cost for kerosene for this unit?

\$.00 OR 1. Kerosene not used

H20c. What is the average monthly cost for water for this unit?

\$.00 OR 1. Included in rent
 2. No charge

H20d. What is the average monthly cost for other fuels (such as oil, gas, wood, etc.) for this unit?

\$.00 OR 1. Included in rent
 2. No charge, or these fuels not used.

H21. Is this unit – Read list and circle ONE item.

1. Owned by you or someone in this household with a mortgage or loan?
2. Owned by you or someone else in this household free and clear (without a mortgage)?
3. Rented for cash?
4. Occupied without payment of cash rent?
5. Other; Specify: _____

Ask only if RENT IS PAID for this unit –

H22. What is the monthly rent for this house/unit?

If rent is NOT PAID BY THE MONTH, see the QRB on how to figure the monthly rent.

\$, .00

INTERVIEWER INSTRUCTIONS: Ask questions H23 to H24c if this is a one-family house that someone in this household OWNS OR IS BUYING; otherwise go to page 4 and ask population questions for each member of the household starting with the householder

H23. What is the value of this house? If respondent does not know the value of the house, ask –

How much it would cost to build a house like this?

\$, .00

H24a. Is there a mortgage, deed of trust, contract to purchase, or similar debt on this unit?

1. Yes, mortgage, deed of trust, or similar debt
2. Yes, contract to purchase
3. No – SKIP TO FIRST PERSON

H24b. How much is the regular monthly mortgage payment on THIS UNIT? Include payments only on the first mortgage or contract to purchase.

\$, .00 OR

1. No regular payment required – SKIP TO FIRST PERSON

H24c. Does the regular payment include payments for fire, hazard, or flood insurance on this unit?

1. Yes, insurance included in payment
2. No, insurance paid separately or no insurance
3. No – SKIP TO FIRST PERSON

INTERVIEWER INSTRUCTIONS: Go to page 4 and ask the population questions for each member of the household starting with the person in whose name the house is owned or rented..

FOR VACANT UNITS

C1. Vacancy Status

1. For rent
2. For sale only
3. Rented or sold, not occupied
4. For seasonal/recreational/occasional
5. For migrant worker
6. Other vacant

C2. Is this unit boarded up?

1. Yes
2. No

C3. Months vacant

1. Less than 1
2. 1 or 2
3. 3 to 6
4. 7 to 12
5. 13 to 23
6. 24 or more

NOTES:

POPULATION QUESTIONS

INTERVIEWER INSTRUCTION: Questions 1 – 11b should be asked of all household members. For all questions, CIRCLE only ONE entry.

1. PERSON NUMBER [] [] (from question 1a on page 1)

Last name: _____
First name: _____

2. How is ... related to the Householder? (Circle one entry. If "Other relative" circle 7 below, and print exact relationship, such as wife's mother, sister's son, etc.)

- | | |
|------------------------------|-----------------------------------|
| 1. Householder | 7. Other relative, specify: _____ |
| 2. Husband/wife | |
| 3. Natural born son/daughter | |
| 4. Adopted son/daughter | |
| 5. Brother/sister | 8. Non-relative [] [] |
| 6. Father/ mother | |

3. Is ... 1. Male 2. Female [] []

4a. What is ... 's date of birth? If unknown, please give your best estimate. (Print the date in the boxes).

MM / DD / YYYY

4b. How old is ... ? (Age should be in complete years as of April 1, 2000. Print age in the boxes).

Age in years [] []

5. Is ... now married, widowed, divorced, separated, or has never been married? Circle ONE item.

- | | |
|----------------|------------------|
| 1. Now married | 4. Separated |
| 2. Widowed | 5. Never married |
| 3. Divorced | |

6. What is ... 's ethnic origin? For example, Yapese, Pohnpeian, Mortlockese, Satawalese, Filipino, etc. Print no more than two groups.

1. _____ [] []
2. _____ [] []

7. What is ... 's religion?

- | | |
|-------------------------------|-------------------|
| 1. Roman Catholic | 5. Baptist |
| 2. Congregation | 6. Other religion |
| 3. Latter Day Saints (Mormon) | 7. Refused |
| 4. Seventh Day Adventist | 8. No religion |

8. Where was ... born? Print the name of the village/ island, municipality, FSM state, or other country in the space below. If ... was born in a hospital, record the place of the usual residence of the mother just before she went to the hospital.

Village/island: _____ [] []
Municipality: _____ [] []
FSM state: _____ [] []
Other country: _____ [] []

9. If ... is a FSM citizen, what is ... 's legal residence? Print the name of the municipality and the FSM state in the space below. If not, record the country of citizenship.

Municipality: _____ [] []
FSM state: _____ [] []
Country of citizenship: _____ [] []

10. Is ... a dependent of an active-duty or retired member of the Armed Forces of the United States or of the full-time Military Reserves or National Guard? "Active duty" does NOT include training for the military Reserves or National Guard.

- Yes, dependent of active-duty member of the Armed Forces.
- Yes, dependent of retired member of the Armed Forces, or dependent of an active duty or retired member of the National Guard or Armed Forces Reserves
- No

11a. Since when has ... live continuously in this municipality?

- Since birth - SKIP TO INTERVIEWER CHECK ITEM (ICI) AFTER 11b.
- Since MM / YYYY

11b. Where was the previous place of residence?

Municipality: _____ [] []
FSM state: _____ [] []
Other country: _____ [] []

INTERVIEWER CHECK ITEM (ICI). CIRCLE ONE BASED QUESTION 4.

- Born before April 1, 1997 – Ask Q12
- Born after April 1, 1997 or later – GO TO NEXT PERSON

12. Since February 1, 2000, has ... attended regular school or college? Include only pre-kindergarten, pre-school, kindergarten, elementary school, and school which leads to a high school diploma or a college.

- No, never attended school – SKIP TO 14.
- No, attended in the past, but not since February 1, 2000.
- Yes, public school, public college
- Yes, private school

13. How much school has ... COMPLETED? Read categories if person is unsure. Circle entry for the highest grade COMPLETED or degree received. If currently enrolled, circle the previous grade attended or highest grade completed.

- No school completed
- Pre-school, head-start, or kindergarten
- 1st 2nd 3rd 4th 5th 6th 7th 8th 9th 10th 11th
- 12th grade, NO DIPLOMA
- HIGH SCHOOL GRADUATE—High school equivalent (example: GED program)
- Some college but no degree
- Associate degree in college—Occup. program
- Associate degree in college—Acad. program
- Bachelor's degree (example: BA, AB, BS)
- Master's degree (example: MA, MS, Meng, Med, MSW, MBA)
- Professional school degree (example: MD, DDS, DVM, LLB, JD)
- Doctorate degree (example: PhD, EdD)

14. Does ... know how to read and write in any language?

- Yes
- No

15a. What languages does ... speak? List in order of usage with the most used language first and the least used last.

1. _____ [] []
2. _____ [] []
3. _____ [] []

15b. What is the language that ... usually speaks at home?

[] []

ICI: CIRCLE BASED ON QUESTION 4.

- Born before April 1, 1995 – Ask Q16a
- Born after April 1, 1995 or later – GO TO NEXT PERSON

16a. Did ... live in this municipality 5 years ago? (April 1, 1995)

- Yes – SKIP TO NEXT ICI
- No – Ask 16b

16b. What is the name of the municipality, FSM state, or other country where ... lived 5 years ago?

Municipality: _____ [] []
FSM state: _____ [] []
Other country: _____ [] []

ICI: CIRCLE ITEM BASED ON QUESTION 3.

- Females born before April 1, 1987- Ask Q17
- All others – SKIP TO NEXT (ICI)
