GUAM AND THE PACIFIC AREA

GUAM—ELECTION DISTRICTS, CITIES, AND VILLAGES

Guam

GENERAL

This report presents basic statistics on the subjects for which information was collected in the Census of Housing as of April 1, 1960. The housing unit is the unit of enumeration and of tabulation for the data in this report. Data are shown for the island as a whole and, separately, for the civil and military portions of election districts.

The statistics relate to occupancy characteristics, structural characteristics, plumbing facilities, equipment, and financial characteristics.

The 1960 Census was the first census of housing ever conducted in Guam. In 1920 and subsequent censuses, the population of the island was enumerated in conjunction with the regular decennial census of the United States, the field work having been done under the supervision of the Governor or some member of his staff in accordance with plans prescribed by the Director of the Census. In the 1960 Census, Mr. Manuel F. L. Guerrero, Assistant Secretary of Guam, served as the Census Supervisor.

All of the data were collected by direct interview or observation by the enumerator. Some of the information required for identification of separate housing units was obtained by the enumerator as part of the procedure for securing complete coverage of all living quarters.

All items were enumerated and tabulated on a complete-count basis. Medians are not shown when the base is less than 50 housing units. Distributions of financial characteristics are not shown for any group of less than 5 housing units in order to avoid disclosure of information about individual persons or units. Leaders (...) in a data column indicate that there are no cases in the category, or that the number of cases is insufficient for computation of a median, or that the data were suppressed to avoid disclosure.

Description of Area

Guam is divided into 19 election districts which are the principal administrative units of the island. Ten of these contain military installations of the United States. For such districts, the data are shown separately for the civil and military portions of the election district.

The map on page 3 shows the election districts, the cities, and the villages of the island.

Availability of Unpublished Data

Practically all of the housing data tabulated for Guam are presented in the published report. Special tabulations can be prepared on a reimbursable basis. Requests for additional information should be addressed to the Chief, Housing Division, Bureau of the Census, Washington 25, D.C.

DEFINITIONS AND EXPLANATIONS

The definitions used in collecting the data are comparable to those used in the United States. The definitions and explanations were developed after consultation with users of census data in order to provide more useful statistics. The definitions below are consistent with the instructions given to the enumerator. As in all surveys, there were probably some failures to execute the instructions exactly and some errors have undoubtedly gone undetected.

Living Quarters

Living quarters were classified as housing units or group quarters. A housing unit is usually a house or an apartment but it may be a room in a hotel or other space occupied as living quarters. The inventory of housing units includes vacant as well as occupied units. For occupied living quarters, the determination of what constituted a housing unit was made on the basis of questions on living arrangements asked by the enumerator. Identification of vacant housing units was based partly on observation by the enumerator and partly on information obtained from owners, landlords, or neighbors.

Housing unit.--A house, an apartment or other group of rooms, or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the occupants do not live and eat with any other persons in the structure and there is either (1) direct access from the outside or through a common hall or (2) a kitchen or cooking equipment for the exclusive use of the occupants of the unit. The occupants of a housing unit may be a family or other group of persons, or a person living alone.

Group quarters.--Occupied quarters which do not qualify as housing units are classified as group quarters. They are located most frequently in institutions, hospitals, nurses' homes, rooming and boarding houses, and military and other types of barracks. A house or

apartment shared by the person in charge and five or more persons unrelated to him are also classified as group quarters. Group quarters are not included in the housing inventory and no information on their characteristics was collected. Although the occupants of these quarters were enumerated for the 1960 Census of Population, they were omitted from the distributions of persons per housing unit and persons per room in this report.

Occupancy Characteristics

Occupied housing unit.--A housing unit is "occupied" if it is the usual place of residence for the person or group of persons living in it at the time of enumeration. Included are units occupied by persons who were only temporarily absent (for example, on vacation) and units occupied by persons with no usual place of residence elsewhere.

Tenure.--A housing unit is "owner occupied" if the owner or co-owner lives in the unit, even if it is mortgaged or not fully paid for, and even if the owner of the unit does not own the land. All other occupied units are classified as "renter occupied," whether or not cash rent is paid. Examples of units for which no cash rent is paid include units occupied in exchange for services rendered, and units which are owned by relatives and occupied without payment of rent.

The owner-occupied housing units are classified as "one unit, no business," "one unit, with business," or "two or more units" on the basis of buildings on the property, in order to limit distributions of value to the first of these categories.

"Business" is defined as a clearly recognizable commercial establishment, such as a store, restaurant, or filling station on the same property. "One unit, no business" means that the property consists of only one housing unit without business premises, plus the land. The "two or more units" category includes properties on which there are two or more housing units, even though each is a detached one-unit structure. "One unit, with business" and "two or more units" are combined in the table as "other owner occupied." The "one unit, no business" category is broken down further into "unit and land owned," "unit owned, land rented," and "unit owned, land rent free" according to the tenure of the land on which the housing unit is situated.

Race.--Occupied housing units were classified according to the race of the head of the household into three groups--white, Chamorro, and other. The concept of race as it has been used by the Bureau of the Census is derived from that which is commonly accepted by the general public. It does not, therefore, reflect clear-cut definitions of biological stock, and several categories obviously refer to nationality. The classification was obtained in most cases by the enumerator's observation. However, where the enumerator failed to report race, the classification was made in the editing process for the population reports.

The term "white" is used to designate a person of the Caucasian race. "Chamorro" is used to designate descendants of the aboriginal Micronesian inhabitants of Guam. It includes not only full-blooded Chamorros but also persons of mixed Chamorro and other ancestry. "Other" includes Filipinos, Negroes, Chinese, Japanese, Polynesians, etc.

Persons.--All persons enumerated in the 1960 Census of Population as members of the household were counted in determining the number of persons who occupied the housing unit. These persons include any lodgers, foster children, wards, and resident employees who shared the living quarters of the household head.

The median number of persons for occupied housing units is the theoretical number which divides the distribution into two numerically equal parts, with half of the cases larger than this theoretical number and the other half smaller. In computation of the median number of persons, a continuous distribution was assumed, with the whole number of persons as the midpoint of the class interval. For example, when the median was in the 3-person group, the lower and upper limits were assumed to be 2.5 and 3.5 persons, respectively.

Persons per room.--The number of persons per room was computed for each occupied housing unit by dividing the number of persons by the number of rooms in the unit. In computing the ratio, the terminal categories of "10 or more" for both persons and rooms were given a mean value of 11.

Vacant housing unit.--A housing unit is "vacant" if no persons were living in it at the time of enumeration. However, if its occupants were only temporarily absent, the unit was considered occupied. Units temporarily occupied by persons having a usual place of residence elsewhere were considered vacant.

Newly constructed vacant units were included in the housing unit inventory if construction had reached the point that all the exterior windows (or shutters) and doors were installed and the final usable floors were in place. Vacant units which were dilapidated or of inadequate original construction were included provided they were still usable as living quarters. Vacant quarters were excluded if being demolished, if there was positive evidence that they were to be demolished, or if so badly deteriorated that they were no longer habitable.

"Vacant available for sale or rent" includes units which are offered for sale or rent. "Vacant other" includes the remaining vacant housing units such as units rented or sold and awaiting occupancy, units held off the market for occasional use, and units held off the market for other reasons.

Structural Characteristics

Units in structure.--A structure is defined as a separate building that either has open space on all four sides, or is separated from other structures by

dividing walls that extend from ground to roof. Structures containing only one housing unit were further classified as detached or attached. A one-unit detached structure has open space on all four sides and contains only one housing unit. Such a structure is considered detached even though it has an adjoining shed or private garage or contains a business unit. A one-unit attached structure contains only one housing unit and has one or more walls extending from ground to roof separating it from adjoining structures.

Statistics are presented in terms of the number of housing units rather than the number of residential structures. For housing units in one-unit structures, the number of housing units and the number of structures are the same. For the "2 or more" unit category, the number of structures cannot be ascertained.

Rooms.--The number of rooms is the count of whole rooms used for living purposes, such as living rooms, dining rooms, bedrooms, kitchens, finished attic or basement rooms, recreation rooms, lodgers' rooms, and rooms used for offices by a person living in the unit. Not counted as rooms are bathrooms; halls, foyers, or vestibules; closets; alcoves; pantries; strip or pull-man kitchens; laundry rooms; and unfinished attics, basements, and other space used for storage.

In the computation of the median number of rooms, a continuous distribution was assumed, with the whole number of rooms as the midpoint of the class interval. For example, when the median was in the 3-room group, the lower and upper limits were assumed to be 2.5 and 3.5 rooms, respectively. The median was computed on the basis of the tabulation groups shown in the table. If the median fell in the category "6 rooms or more," it is shown in the table as "5.5+" rooms.

Bedrooms.--The number of bedrooms is the count of rooms used mainly as bedrooms. In addition to regular bedrooms, the count includes studies, dens, enclosed porches, finished attics, guest rooms, or other extra rooms if they are currently used principally and regularly for sleeping. Rooms used only occasionally for sleeping, such as a living room with a hideaway bed, were not to be counted as bedrooms. A housing unit consisting of only one room, such as a one-room efficiency apartment, was to be reported as having no bedroom.

Type of construction.--Structures are classified as "concrete or masonry" when built of concrete, brick, tile, stone, or other kind of masonry. Structures built of wood are classified as "wood frame." Structures built of corrugated metal in a half-barrel shape are classified as "quonset." "Other" includes structures built of a combination of materials, or built of materials other than those specified above.

Plumbing Facilities

Water supply.--A housing unit is classified as having "piped water inside structure" if there is running water inside the structure and it is available

to the occupants of the unit. A unit has piped hot water even though the hot water is not supplied continuously; for example, it may be supplied only at certain times of the day, week, or year. Where the running water inside the structure is never heated in the pipes, it is shown as "only cold piped water inside the structure." Units with "piped water outside structure" have no running water inside the structure but have running water available on the same property, either outdoors or in another structure. The category "none" includes units for which the only source of water is a hand pump, open well, spring, cistern, etc., and units in which the occupants obtain water from a source which is not on the same property.

Toilet facilities.--Flush toilets are classified by two criteria: Whether inside the structure or elsewhere on the property and whether for exclusive use or shared. Flush toilets inside the structure for exclusive use are shown separately in the tables, and the remaining flush toilets (inside shared, outside for exclusive use, and outside shared) are combined as "flush toilet outside, or shared inside."

Bathing facilities.--A housing unit has a bathtub or shower if either facility, supplied with piped water (not necessarily hot water), is inside the structure and available for the use of the occupants of the unit. Bathing facilities for exclusive use are differentiated from those that are shared with occupants of other units. The category "no bathtub or shower" consists of units with only portable facilities, as well as units having no bathing facilities inside the structure available for the use of the occupants.

Exclusive use.--A facility is "for exclusive use" when it is used only by the occupants of the housing unit being enumerated, including any lodgers or other unrelated persons who are part of the household. For a structure consisting of only one housing unit, all equipment inside the structure is "for exclusive use."

Shared.--A facility is shared when it is used by the occupants of more than one housing unit, or is used by the occupants of a housing unit and also by the employees or others in a business establishment in the same structure, or is used by the occupants of the unit being enumerated and also intended for use by the occupants of a unit vacant at the time of enumeration.

Inside structure.--"Inside structure" means that a facility is located in the same building as the housing unit being enumerated. It may be located within the housing unit itself, or in a hallway or room used by occupants of several units. It may even be necessary to go outdoors to reach that part of the structure in which the facility is located. A facility in the basement or in an enclosed porch, or in the enclosed portion of a partially enclosed porch is "inside structure."

Outside structure.--"Outside structure" means that a facility is elsewhere on the same property in another building, or in an open porch, or outdoors, and is available for use by the occupants of the unit being enumerated.

Equipment and Cooking Fuel

Electric refrigerator.--"With electric refrigerator" refers to housing units with an electric refrigerator in the unit or in the kitchen if that is located elsewhere.

Clothes washing machine.--"With washing machine" describes units having power-driven clothes washing machines. These include all types of power-operated washing machines, automatic and semi-automatic machines, and the wringer or spinner machines. A clothes washing machine owned by a member of the household was to be reported, whether it was located in the housing unit or elsewhere on the property.

Cooking fuel.--The cooking fuel to be reported was the one used most for cooking. "Other fuel" consists primarily of wood and kerosene.

Financial Characteristics

Value.--Value is the respondent's estimate of how much the property would sell for on the current market (April 1960). Value data are restricted to owner-occupied units having only one housing unit on the property and no business. A property generally consists of the house and the land on which it stands. The estimated value of the entire property, including the estimated value of the land, was to be reported, even if the occupants owned the house but not the land. The entire value of the property, rather than the proportionate share of the occupants, was to be reported in any case of joint ownership with persons living elsewhere.

In the computation of median value, the lower limit of a class interval was assumed to stand at the beginning of the value group and the upper limit at the beginning of the successive value group. Medians were rounded to the nearest hundred dollars. The median was computed on the basis of the tabulation groups shown in the tables.

Contract land rental.--Contract land rental is the amount paid per month for the use of rented land for units classified as "unit owned, land rented." The data are restricted to units having only one housing unit in the property and no business. The rental agreement may have specified annual payments or payments at other intervals, but these were converted to monthly rates.

Gross rent.--The computed rent termed "gross rent" is the contract rent plus the average monthly cost of utilities (water and electricity) if these items are paid for by the renter in addition to the contract rent. Thus, gross rent eliminates rent

differentials which result from varying practices with respect to the inclusion of utilities as part of the rental payment. Renter-occupied units for which no cash rent was paid and units for which a rental amount was not reported were excluded from the computation of the median.

Contract rent.--Contract rent is the monthly rent agreed upon for a housing unit regardless of any furnishings, utilities, or services that may be included. Weekly rents, semi-monthly rents, etc., were converted to monthly rates. Renter-occupied units for which no cash rent was paid and units for which a rental amount was not reported were excluded from the computation of the median.

COLLECTION AND PROCESSING OF DATA

The collection and processing of data in the 1960 Censuses of Population and Housing followed the same general pattern as that used in the 1950 Census of Population.

Collection of Data

Field enumeration.--A separate questionnaire was used for each household. The enumeration began on April 1, 1960, and was completed in June. During the last week in March, the enumerators were given approximately 16 hours of training, which included instructions on the individual schedule items, a discussion of enumeration procedures, and several practice interviews. The information for each household was obtained from the head or other responsible member of the household by direct interview.

Field review.--During the first weeks of the enumeration, the crew leader was instructed to check each enumerator's work to make sure that the enumerator was performing his duties properly and to provide additional instruction where necessary. If the results of this first review showed that the enumerator needed further supervision and training, additional reviews were scheduled during the enumeration period. A final review of each enumerator's work was conducted upon completion of his assignment. In addition to checking individual items on the schedule, the completeness of coverage was checked in various ways. One check included an advance listing by the crew leader of a sample of the addresses in each district, and a comparison of these addresses with the list of households reported by the enumerator.

Processing of Data

Manual coding and editing of schedule.--After the schedules were assembled and checked for completeness in the field, they were sent to a central processing office in Jeffersonville, Indiana, for manual coding and editing. Most housing items were precoded on the schedule, requiring little manual editing and coding. The computation of gross rent and the coding of the

financial items constituted the major portion of the work required for the housing schedule. The schedules then were forwarded to Washington for card punching.

Machine processing.--The information for each housing unit was transferred to punchcards which were then processed through a series of mechanical edits to correct inconsistencies and unacceptable codes. Allocations for such corrections were generally made on the basis of related characteristics of the housing unit. For example, if the entry for tenure was "rented," but only value rather than rent entries was shown, the tenure entry was changed to indicate an owner-occupied unit. If, on the other hand, tenure for an occupied unit was omitted but a rental amount was reported, the tenure was edited to "rented."

Allocations for nonresponse were made only for selected items. For the bulk of the items a "not reported" classification was retained. When the machine editing was completed, the cards were sorted and tabulated on conventional equipment. The tabulated data were posted to worksheets from which the final tables were typed.

The processing differed from that followed for the United States which utilized electronic scanning and computing equipment.

Accuracy of Data

Human and mechanical errors occur in any mass statistical operation, such as a decennial census. Such errors, including failure to obtain required information and recording information in the wrong places or incorrectly, produce inconsistencies between entries for interrelated items on the field documents. Errors also occur in the clerical coding and editing operations and in the machine processing of the data.

Considerable effort is expended in every census to keep the errors in each step at an acceptably low level. Review of the enumerator's work, verification of manual coding and editing, assignment of acceptable codes in place of blanks or unacceptable entries, and checking of the tabulated figures tend to reduce the effects of the errors in the census data.

APPENDIX

HOUSING PORTION OF GUAM ENUMERATION SCHEDULE, Form 60PH-1GM

U. S. DEPARTMENT OF COMMERCE
BUREAU OF THE CENSUS

1960 CENSUS OF POPULATION AND HOUSING

GUAM

a. Election district		d. ED number	
b. City or village		e. Housing unit number	
c. Enumerated by	Date	f. If continued from another schedule, check here <input type="checkbox"/>	
g. Address--House No.	Apt. No.	Street, avenue, or road (If unnamed, describe location)	

INSTRUCTIONS TO ENUMERATOR

- FIRST** — Determine if there is more than one housing unit.
ASK
Does more than one family live in this home?
If "Yes" - Do they live and eat with the family, or do they have separate living quarters?
- SECOND** — Using one page for each person, enter names in P1 and mark relationship in P2. List persons in this order:
The head
His wife
Unmarried sons and daughters (in order of age)
Married sons and daughters and their families
Other relatives
Other persons, such as lodgers, maids, or hired hands who live in and their families living in.
ASK
What is the name of the head of this household?
What are the names of all other persons who live here?
- THIRD** — Check for completeness.
ASK
Is there anyone else who usually lives here, but is temporarily away?
Is anyone else staying here now who has no usual residence elsewhere?
I have names now. Is that right?
- FOURTH** — Fill P3 - P22 for each person.
- FIFTH** — Check for visitors. Fill an Individual Census Report if there is no one to report for a visitor at his home.
ASK
Did any visitor stay here overnight Thursday, March 31?
- SIXTH** — Check type of living quarters in H1. Fill H2 to H22 (except in group quarters). For "unit," use "house," "apartment," or "rooms" as appropriate.
- SEVENTH** — Check for other units.
ASK
Does anyone else live here in this building or elsewhere on this property?
Are there any vacant apartments or any vacant rooms for rent?
- EIGHTH** — Ask about the next unit.
Name of head?
Number of people?
When at home?
If vacant--Whom to see?

CONFIDENTIAL - The Census is required by the United States Constitution and further authorized by 13 U.S.C. 5, 9, 141, 221-4. The law requires that the inquiries be answered completely and accurately, and guarantees that the information furnished will be accorded confidential treatment. The Census report cannot be used for purposes of taxation, investigation, or regulation.

HOUSING ITEMS	
FOR ALL HOUSING UNITS WHETHER OCCUPIED OR VACANT	IF "OCCUPIED"
H1. Type of living quarters: Housing unit----- <input type="checkbox"/> 1 Group quarters----- <input type="checkbox"/> 2 (If marked here, omit remaining items.)	H12. Is there an electric refrigerator in this unit? Yes----- <input type="checkbox"/> 1 No----- <input type="checkbox"/> 2
H2. Type of construction: Masonry----- <input type="checkbox"/> 1 Frame----- <input type="checkbox"/> 2 Quonset----- <input type="checkbox"/> 3 Mixture----- <input type="checkbox"/> 4	H13. What fuel is used most for cooking? Electricity----- <input type="checkbox"/> 1 Wood----- <input type="checkbox"/> 2 Kerosene----- <input type="checkbox"/> 3 Other fuel----- <input type="checkbox"/> 4 No cooking----- <input type="checkbox"/> 5
H3. Number of units in structure: 1 unit detached----- <input type="checkbox"/> 1 1 unit attached----- <input type="checkbox"/> 2 2 units----- <input type="checkbox"/> 3 3 units----- <input type="checkbox"/> 4 4 units----- <input type="checkbox"/> 5 5 or more units----- <input type="checkbox"/> 6	H14. Is there a clothes washing machine in this unit? Yes----- <input type="checkbox"/> 1 No----- <input type="checkbox"/> 2
H4. How many rooms are in this unit? Count kitchen but not bathroom. (Number)	H15. Is this unit owned by someone living in it or is it rented? Owned or being bought----- <input type="checkbox"/> 1 Rented----- <input type="checkbox"/> 2 No cash rent----- <input type="checkbox"/> 3
H5. How many bedrooms are in this unit? (Number) or None----- <input type="checkbox"/>	IF "OWNED OR BEING BOUGHT" H16. Description of property: One unit, no business----- <input type="checkbox"/> 1 One unit, with business----- <input type="checkbox"/> 2 Two or more units----- <input type="checkbox"/> 3
H6. Is there piped running water for this unit? Piped inside structure: Hot and cold----- <input type="checkbox"/> 1 Cold only----- <input type="checkbox"/> 2 Piped outside structure----- <input type="checkbox"/> 3 No piped running water: Hand pump----- <input type="checkbox"/> 4 Other water supply or none----- <input type="checkbox"/> 5	IF "ONE UNIT, NO BUSINESS" H17. About how much would this property sell for on today's market? \$.....00
H7. Is there a flush toilet for this unit? Yes, inside structure----- <input type="checkbox"/> 1 Yes, outside structure----- <input type="checkbox"/> 2 No flush toilet----- <input type="checkbox"/> 3	H18. Does the owner also own the land, or does he rent the land? Owns or is buying the land----- <input type="checkbox"/> 1 Rents the land----- <input type="checkbox"/> 2 No cash rent paid for use of the land----- <input type="checkbox"/> 3
H8. Is the toilet shared with another unit? For exclusive use----- <input type="checkbox"/> 1 Shared----- <input type="checkbox"/> 2 No flush toilet----- <input type="checkbox"/> 3	H19. If the land is rented - What is the monthly rent for this land? \$.....00
H9. Is there a bathtub or shower for this unit? For exclusive use----- <input type="checkbox"/> 1 Shared----- <input type="checkbox"/> 2 No bathtub or shower----- <input type="checkbox"/> 3	IF "RENTED" H20. What is the monthly rent for this unit? \$.....00
H10. Occupancy: Occupied----- <input type="checkbox"/> 1 Vacant: For rent----- <input type="checkbox"/> 2 For sale only----- <input type="checkbox"/> 3 Other vacant----- <input type="checkbox"/> 4	H21. In addition to rent, does renter pay for: a. Electricity? Yes----- <input type="checkbox"/> 1 No----- <input type="checkbox"/> 2 b. Water? Yes----- <input type="checkbox"/> 1 No----- <input type="checkbox"/> 2
H11. Does anyone living in this house operate a farm? Yes----- <input type="checkbox"/> 1—Enter agriculture questionnaire number..... No----- <input type="checkbox"/> 2	H22. What is the average monthly cost for: a. Electricity? \$.....00 per month (Nearest dollar) b. Water? \$.....00 per month (Nearest dollar)

VIRGIN ISLANDS OF THE UNITED STATES AND THE CARIBBEAN AREA

VIRGIN ISLANDS OF THE UNITED STATES—ISLANDS, CITIES, AND QUARTERS

Virgin Islands of the United States

GENERAL

This report presents basic statistics on the subjects for which information was collected in the Census of Housing as of April 1, 1960. The housing unit is the unit of enumeration and of tabulation for this report. Data are shown for the Virgin Islands of the United States by urban-rural residence, for each of the three principal islands, for the two urban places, and for the rural balance of each island containing an urban place.

The statistics relate to occupancy characteristics, structural characteristics, plumbing facilities, equipment, and financial characteristics. The subjects are a modification of those covered in the 1950 and 1940 Censuses of Housing. The changes from 1950 are relatively minor; in comparison with 1940, the range of subject matter and degree of detail are increased in some respects and reduced in others.

The field work was done under the supervision of the Governor in accordance with plans prescribed by the Director of the Census. The Honorable John D. Merwin, Governor of the Virgin Islands, served as Census Supervisor, and Dr. Alonzo G. Moron as Assistant Supervisor, for the 1960 Census enumeration.

All of the data were collected by direct interview or by observation by the enumerator. Some of the information required for identifying separate housing units was obtained by the enumerator as part of the procedure for securing complete coverage of all living quarters.

All items were enumerated and tabulated on a complete-count basis. Medians are not shown when the base is less than 50 housing units. Distributions of financial characteristics are not shown for any group of less than 5 housing units in order to avoid disclosure of information about individual persons or units. Leaders (...) in a data column indicate that there are no cases in the category, or that the number of cases is insufficient for computation of a median, or that the data were suppressed to avoid disclosure.

Description of Areas

The map on page 3 of this report shows the three principal islands of the Virgin Islands group, the three incorporated places, and the "quarters" or minor civil divisions of the unincorporated area. Almost all of the numerous small islands shown on the map are uninhabited and without living quarters. The few which are inhabited are included with the principal island to which they are closest.

Urban-Rural Residence

According to the definition adopted for use in the 1960 Censuses of the area, places with 2,500 inhabitants or more are classified as urban. Charlotte Amalie and Christiansted cities, with 12,880 and 5,137 inhabitants, respectively, are urban. Frederiksted city, with 2,177 inhabitants, and all unincorporated areas are rural.

Availability of Unpublished Data

Practically all of the housing data tabulated for the Virgin Islands are presented in the published report. Special tabulations can be prepared on a reimbursable basis. Requests for additional information should be addressed to Chief, Housing Division, Bureau of the Census, Washington 25, D.C.

DEFINITIONS AND EXPLANATIONS

The definitions used in collecting the data are comparable to those used in the United States. The definitions and explanations were developed after consultation with users of census data in order to provide more useful statistics. The definitions below are consistent with the instructions given to the enumerator. As in all surveys, there were probably some failures to execute the instructions exactly and some errors have undoubtedly gone undetected.

Living Quarters

Living quarters were classified as housing units or group quarters. For occupied living quarters, this distinction was made on the basis of questions asked by the enumerator. Identification of vacant housing units was based partly on observation by the enumerator and partly on information obtained from owners, landlords, or neighbors.

Housing unit.--A house, an apartment or other group of rooms, or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the occupants do not live and eat with any other persons in the structure and there is either (1) direct access from the outside or through a common hall or (2) a kitchen or cooking equipment for the exclusive use of the occupants of the unit.

Group quarters.--Occupied quarters which do not qualify as housing units are classified as group quarters. They are located most frequently in institutions, hospitals, nurses' homes, rooming and boarding

houses, and military and other types of barracks. A house or apartment shared by the person in charge and five or more persons unrelated to him are also classified as group quarters. Group quarters are not included in the housing inventory and no information on their characteristics was collected. Occupants of these quarters were enumerated for the 1960 Census of Population, but are omitted from the distributions of persons per housing unit and persons per room in this report.

Occupancy Characteristics

Occupied housing unit.--A housing unit is "occupied" if it is the usual place of residence for the person or group of persons living in it at the time of enumeration. Included are units occupied by persons who were only temporarily absent (for example, on vacation) and units occupied by persons with no usual place of residence elsewhere.

Vacant housing unit.--A housing unit is "vacant" if no persons were living in it at the time of enumeration. However, if its occupants were only temporarily absent, the unit was considered occupied. Units temporarily occupied by persons having a usual place of residence elsewhere were considered vacant. Vacant units include those offered for rent or for sale, those rented or sold and awaiting occupancy, those held for occasional use, and those held off the market for other reasons.

The inventory of housing units includes both vacant and occupied units. Newly constructed vacant units were included in the inventory if construction had reached the point that all the exterior windows (or shutters) and doors were installed and the final usable floors were in place. Vacant units which were dilapidated or of inadequate original construction were included provided they were still usable as living quarters. Vacant quarters were excluded if being demolished, if there was positive evidence that they were to be demolished, or if so badly deteriorated that they were no longer habitable.

Tenure.--A housing unit is "owner occupied" if the owner or co-owner lives in the unit, even if it is mortgaged or not fully paid for, and even if the owner of the unit does not own the land. All other occupied units are classified as "renter occupied," whether or not cash rent is paid. Examples of units for which no cash rent is paid include units occupied in exchange for services rendered, and units which are owned by relatives and occupied without payment of rent.

The owner-occupied housing units are classified as "one unit, no business," "one unit, with business," or "two or more units" on the basis of buildings on the property, in order to limit distributions of value to the first of these categories. "Business" is defined as a clearly recognizable commercial establishment, such as a store, restaurant, or filling station on the same property. "One unit, no business" means that the property consists of only one housing unit without business premises, plus the land. The "two or

more units" category includes properties in which there are two or more housing units in one structure or, if there is a one unit structure, there is at least one other structure with a housing unit on the property. "One unit, with business" and "two or more units" are combined in the table as "other owner occupied." The "one unit, no business" category is classified further into "unit and land owned," "unit owned, land rented," and "unit owned, land rent free" according to the tenure of the land on which the housing unit is situated.

Color.--Occupied housing units are classified by the color of the head of the household according to the definition used in the 1960 Census of Population. The term "color" refers to the division of households into two groups, white and nonwhite. The group designated as "nonwhite" consists of Negroes, persons of mixed white and Negro parentage, Japanese, Chinese, and other nonwhite races.

Persons.--All persons enumerated in the 1960 Census of Population as members of the household were counted in determining the number of persons who occupied the housing unit. These persons include any lodgers, foster children, wards, and resident employees who shared the living quarters of the household head.

The median is a theoretical number or value which divides a distribution into two numerically equal parts, with half of the cases larger than this theoretical number or value and the other half smaller. In computation of the median number of persons, a continuous distribution was assumed, with the whole number of persons as the midpoint of the class interval. For example, when the median was in the 3-person group, the lower and upper limits were assumed to be 2.5 and 3.5 persons, respectively.

Persons per room.--The number of persons per room was computed for each occupied housing unit by dividing the number of persons by the number of rooms in the unit. In computing the ratio, the terminal categories of "10 or more" for persons and rooms were given a mean value of 11.

Equipment

Exclusive use.--A facility is "for exclusive use" when it is used only by the occupants of the housing unit being enumerated, including any lodgers or other unrelated persons who are part of the household. At a structure consisting of only one housing unit, all equipment inside the structure is "for exclusive use."

Shared.--A facility is shared when it is used by the occupants of more than one housing unit, or is used by the occupants of a housing unit and also by the employees or others in a business establishment in the same structure, or is used by the occupants of the unit being enumerated and also intended for use by the occupants of a unit vacant at the time of enumeration.

Inside structure.--"Inside structure" means that a facility is located in the same building as the housing unit being enumerated. It may be located within the housing unit itself, or in a hallway or room used by occupants of several units. It may even be necessary to go outdoors to reach that part of the structure in which the facility is located. A facility in the basement, or in an enclosed porch, or in the enclosed portion of a partially enclosed porch, is "inside structure."

Outside structure.--"Outside structure" means that a facility is elsewhere on the same property in another building, or on an open porch, or outdoors, and is available for use by the occupants of the unit being enumerated.

Mechanical refrigeration.--"With mechanical refrigeration" refers to housing units with an electric, gas, or kerosene refrigerator in the structure, or in the kitchen if that is located elsewhere. This category includes any units in apartment buildings at which food storage cabinets in the individual apartments are connected to a central refrigerating machine.

Electric lighting.--The question on electric lighting referred to the unit being enumerated, rather than to any other part of the structure. Thus, if a store and a housing unit were in the same building, electric lighting for the store was not a basis for reporting electric lighting for the housing unit also; it was necessary that the housing unit itself be equipped for electric lighting in order to be so reported. The question dealt with presence of equipment, regardless of whether it was in use at the time of enumeration. A unit equipped for electric lighting was to be so reported, even though electric service had been disconnected because the unit was vacant, or because of unpaid electric bills, or for any other reason.

Kitchen or cooking equipment.--A kitchen is a room primarily used for cooking and the preparation of meals. Cooking equipment is a range or stove, whether or not used regularly, or else other equipment (a hot-plate, electrical appliances, etc.) used regularly for the preparation of meals.

Structural Characteristics

Units in structure.--A structure is defined as a separate building that either has open space on all four sides, or is separated from other structures by dividing walls that extend from ground to roof. Statistics are presented in terms of the number of housing units rather than the number of residential structures.

Rooms.--The number of rooms is the count of whole rooms used for living purposes, such as living rooms, dining rooms, bedrooms, kitchens, finished attic or basement rooms, recreation rooms, lodgers' rooms, and rooms used for offices by a person living in the unit. Not counted as rooms are bathrooms; halls, foyers, or

vestibules; closets; alcoves; pantries, strip or pull-man kitchens; laundry rooms; unfinished attics, basements, and other space used for storage.

In the computation of the median number of rooms, a continuous distribution was assumed, with the whole number of rooms as the midpoint of the class interval. For example, when the median was in the 3-room group, the lower and upper limits were assumed to be 2.5 and 3.5 rooms, respectively. The median was computed on the basis of the tabulation groups shown in the table.

Plumbing Facilities

Potable water supply.--Potable water or "sweet water" is water suitable for drinking; in the Virgin Islands, the term is used to distinguish rain water, fresh water, and other nonsalty water from sea water.

"Piped water inside structure" means that potable water is brought into the structure by pressure or gravity from a well, or from a cistern or other storage vessel, or (in Charlotte Amalie) from the public water system, and is distributed through piping to the fixtures at which it is used. There are strong indications that this category was erroneously reported as "private cistern" for several hundred units.

"Private cistern"--this is a permanently located vessel for the collection and storage of rain water, serving one structure or at most a small group of adjoining structures. It may be underground, or attached to the building at or above ground level, or at ground level elsewhere on the property. If attached to or close to the building, it collects drainage from the roof and (if also underground) probably from any adjoining walks or driveways. In hilly rural localities, it is common practice to locate a collection cistern at a higher elevation from which water flows by gravity to a house at a lower elevation.

Analysis of the plumbing facilities reported indicates that "cistern" was entered for several hundred units at which the cistern water was delivered by pressure or gravity through pipes to permanently installed plumbing fixtures. The entry for these units should have been "piped water inside structure."

"Tanks or drums" are portable containers for storage of water which, in most cases, is collected from roof drainage.

"Public standpipe" is a street or roadside hydrant.

"Well" is a well on the property, from which water is not piped to the housing unit.

"Other source" means that there is no source of potable water on the property, and that potable water is purchased from dealers or is purchased or obtained gratis from neighbors.

Toilet facilities.--Flush toilets were classified by three criteria: Whether inside the structure or elsewhere on the property, whether for exclusive use or shared, and whether flushed with salt water (i.e., ocean water) or with potable water. Flush toilets

inside the structure for exclusive use are shown separately in the tabulations, and the other flush toilets (inside shared, outside for exclusive use, and outside shared) are combined as "flush toilet outside, or shared inside."

"Privy" is defined as an outdoor enclosure around a nonflush toilet.

"Night soil collection can" is a container collected at intervals.

"Other toilet facilities or none" includes chemical toilets; "none" means that there are no toilet facilities on the property, but the occupants may have access to facilities on nearby property.

Bathing facilities.--A bathtub or shower was reported only if inside the structure and permanently connected to piped running water. Those elsewhere on the property, any permanently located bathtubs filled as needed by means of buckets, pitchers, etc., and all portable bathing facilities were reported as "no bathtub or shower."

Financial Characteristics

Value.--Value is the respondent's estimate of how much the property would sell for on the current market (April 1960). Value data are restricted to owner-occupied units having only one housing unit on the property and no business. A property generally consists of the house and the land on which it stands. The estimated value of the entire property, including the estimated value of the land, was to be reported, even if the occupants owned a house located on land owned by others. The entire value of the property, rather than the proportionate share of the occupants, was to be reported in any case of joint ownership with persons living elsewhere.

Two distributions of value are shown--one for units at which the occupants own the land as well as the house, and the other for units at which they own the house but not the land. The value distributions for units on rented land were combined with those for units on rent-free land because there were only 93 of the latter.

In the computation of median value, the lower limit of a class interval was assumed to stand at the beginning of the value group and the upper limit at the beginning of the successive value group. Medians were rounded to the nearest hundred dollars. The median was computed on the basis of more tabulation groups than are shown in the tables. The terminal category used in the tabulation of the data was "\$10,000 or more."

The value figures are not comparable with those published in the 1950 Census report because of three differences in concept: (1) 1960 value is the respondent's estimate of current market value, whereas 1950 value is the respondent's report of assessed valuation; (2) for units on land owned by others, the 1960 value includes the estimated value of the land, but the 1950 value figures exclude the land; and (3) the

1960 value distributions include units on rural farms, but the 1950 distributions are limited to nonfarm units.

Annual contract land rental.--Annual contract land rental is the amount to be paid per year for the use of rented land for units classified as "unit owned, land rented." The data are restricted to units having only one housing unit in the property and no business. The rental agreement may specify annual payments or payments at other intervals.

Contract rent.--Contract rent is the monthly rent agreed upon for a housing unit regardless of any furnishings, utilities, or services that may be included. Weekly rents, semimonthly rents, etc., were converted to monthly rates. Renter-occupied units for which no cash rent was paid and units for which a rental amount was not reported were excluded from the computation of the median. The distributions shown in the 1950 Census report were limited to nonfarm units.

Gross rent.--The computed rent termed "gross rent" is the contract rent plus the average monthly cost of utilities (water, electricity) and other fuels, such as kerosene, charcoal, wood, and LP or bottled gas if these items are paid for by the renter in addition to contract rent. Thus, gross rent eliminates rent differentials which result from varying practices with respect to the inclusion of utilities and fuels as part of the rental payment. The distributions shown in the 1950 Census report were limited to nonfarm units. Renter-occupied units for which no cash rent was paid and units for which a rental amount was not reported were excluded from the computation of the median.

COLLECTION AND PROCESSING OF DATA

The collection and processing of data in the 1960 Census of the Virgin Islands followed the same general pattern as in 1950. The principal points of difference between the two censuses are to be found in the content and design of the questionnaire.

Collection of Data

Field enumeration.--In 1960, a separate questionnaire was used for each household, whereas in 1950, each schedule contained 30 lines and the enumerator was instructed to enumerate one household after another, utilizing every line on the schedule for a person. In terms of housing content, the 1960 schedule included questions on kitchen and cooking equipment and on the cost of utilities, neither of which had been asked previously in the Virgin Islands. Three items which were included on the 1950 schedule were dropped in 1960. These related to condition of the housing unit, the exterior material of the unit, and the year the unit was built.

The enumeration began on April 1, 1960, and was completed in July. During the last week in March, the enumerators were given approximately 16 hours of

training, which included instructions on the individual schedule items, a discussion of enumeration procedures, and several practice interviews.

Field review.--During the first week of the enumeration, the crew leader was instructed to check each enumerator's work to make sure that the enumerator was performing his duties properly and to provide additional instruction where necessary. If the results of this first review showed that the enumerator needed further supervision and training, additional reviews were scheduled during the enumeration period. A final review of each enumerator's work was conducted upon completion of his assignment. In addition to checking individual items on the schedule, the completeness of coverage was checked in various ways. One check included an advance listing by the crew leader of a sample of the addresses in each district, and a comparison of these addresses with the list of households reported by the enumerator.

Processing of Data

Manual coding and editing of schedule.--After the schedules were assembled and checked for completeness in the field, they were sent to a central processing office in Jeffersonville, Indiana, for manual coding and editing. Most housing items were completely pre-coded on the schedule and required little manual editing and coding. The computation of gross rent and the coding of the financial items constituted the major portion of the work required for the housing schedule. The schedules were forwarded to Washington for card punching.

Machine processing.--The information for each housing unit was transferred to punchcards which were then processed through a series of mechanical edits to correct inconsistencies and unacceptable codes. Allocations for such corrections were generally made on

the basis of related characteristics of the housing unit. For example, if the entry for tenure was "rented," but only value rather than rent entries were shown, the tenure entry was changed to indicate an owner-occupied unit. If, on the other hand, tenure for an occupied unit was omitted but a rental amount was reported, the tenure was edited to "rented." Allocations for nonresponse, however, were made only for selected items. For the bulk of the items a "not reported" classification was retained. When the machine editing was completed, the cards were sorted and tabulated on conventional equipment. The tabulated data were posted to worksheets from which the final tables were typed.

This procedure is essentially the same as that followed in 1950, except that some of the editing which was done by clerks in 1950 was done by machine in 1960. It differs from the procedure followed in the United States, which utilized electronic scanning and computing devices.

Accuracy of Data

Human and mechanical errors occur in any mass statistical operation such as a decennial census. Such errors include failure to obtain required information and recording information in the wrong places or incorrectly, thus producing inconsistencies between entries for interrelated items on the field documents. Errors also occur in the clerical coding and editing operations and in the machine processing of the data.

Careful efforts are made in every census to keep the errors in each step at an acceptably low level. Review of the enumerator's work, verification of manual coding and editing, assignment of acceptable codes in place of blanks or unacceptable entries, and checking of the tabulated figures tend to reduce the effect of the errors in the census data.

APPENDIX

HOUSING PORTION OF VIRGIN ISLANDS ENUMERATION SCHEDULE, Form 60PH-1V1

U. S. DEPARTMENT OF COMMERCE
BUREAU OF THE CENSUS

1960 CENSUS OF POPULATION AND HOUSING

VIRGIN ISLANDS OF THE UNITED STATES

a. Island		d. ED number	
b. City or quarter		e. Housing unit number	
c. Enumerated by		Date	f. If continued from another schedule, check here --- <input type="checkbox"/>
g. Address -- House No.	Apt. No.	Street, avenue, or road (If unnamed, describe location)	

INSTRUCTIONS TO ENUMERATOR

- FIRST** — Determine if there is more than one housing unit.
ASK
Does more than one family live in this home?
If "Yes" -- Do they live and eat with the family, or do they have separate living quarters?
- SECOND** — Using one page for each person, enter names in P1 and mark relationship in P2. List persons in this order:
The head
His wife
Unmarried sons and daughters (in order of age)
Married sons and daughters and their families
Other relatives
Other persons, such as lodgers, maids, or hired hands who live in and their families living in.
ASK
What is the name of the head of this household?
What are the names of all other persons who live here?
- THIRD** — Check for completeness.
ASK
Is there anyone else who usually lives here, but is temporarily away?
Is anyone else staying here now who has no usual residence elsewhere?
I have names now. Is that right?
- FOURTH** — Fill P3 - P22 for each person.
- FIFTH** — Check for visitors. Fill an Individual Census Report if there is no one to report for a visitor at his home.
ASK
Did any visitor stay here overnight Thursday, March 31?
- SIXTH** — Check type of housing unit in H1. Fill H2 to H22 (except in group quarters). For "unit," use "house," "apartment," or "rooms" as appropriate.
- SEVENTH** — Check for other units.
ASK
Does anyone else live here in this building or elsewhere on this property?
Are there any vacant apartments or any vacant rooms for rent?
- EIGHTH** — Ask about the next unit.
Name of head?
Number of people?
When at home?
If vacant -- Whom to see?

CONFIDENTIAL - The Census is required by the United States Constitution and further authorized by 13 U.S.C. 5, 9, 141, 221-4. The law requires that the inquiries be answered completely and accurately, and guarantees that the information furnished will be accorded confidential treatment. The Census report cannot be used for purposes of taxation, investigation, or regulation.
